

# GA-M750SLI-DS4

AM2+/AM2 socket motherboard for

AMD Phenom™ FX processor/AMD Phenom™ X4 processor/

AMD Phenom™ X3 processor/AMD Athlon™ X2 processor/

AMD Athlon™ processor/AMD Sempron™ X2 processor

AMD Sempron™ processor

## User's Manual

Rev. 1002

12ME-M75SLID4-1002R

## Declaration of Conformity

We, Manufacturer/Importer

G.B.T. Technology Trading GmbH

Bahnhofstr. 16, 22047 Hamburg, Germany

declare that the product

described below is in conformity with the following standards:

CE Marking

EN 60950-1

(reference to the specification under which conformity is declared)

In accordance with 89/338 EEC-EMC Directive

☐ EN 60950-1

Limits and methods of measurement of radio disturbance characteristics of information technology equipment (ITE) high frequency equipment

☐ EN 55013

Limits and methods of measurement of radio disturbance characteristics of broadcast receivers and associated equipment

☐ EN 55014-1

Limits and methods of measurement of radio disturbance characteristics of portable tools and similar electrical apparatus

☐ EN 55015

Limits and methods of measurement of radio disturbance characteristics of fluorescent lamps and luminaires

☐ EN 55020

Immunity from radio interference of broadcast receivers and associated equipment

☐ EN 55022

Limits and methods of measurement of radio disturbance characteristics of information technology equipment

☐ EN 55025

Cabled distribution systems, Equipment for receiving and/or distribution from source and reception system

☐ CE marking

The manufacturer also declares the conformity of above mentioned product with the standard required safety standards in accordance with CE Marking

☐ EN 60950-1

Safety requirements for mains operated equipment, equipment for use in households and similar general use

☐ EN 60950-2

Safety of household and similar electrical appliances

Manufacturer/Importer

Date: May 15, 2008

Name: Timmy Huang

## DECLARATION OF CONFORMITY

Per FCC Part 2, Section 2.1077(a)

Responsible Party Name: G.B.T. INC. (U.S.A.)

Address: 17358 Railroad Street

City of Industry, CA 91748

Phone/Fax No: (818) 854-9338 / (818) 854-9339

hereby declares that the product

Product Name: Motherboard

Model Number: GA-M750SL-DS4

Conforms to the following specifications:

FCC Part 15, Subpart B, Section 15.107(a) and Section 15.109

(a), Class B Digital Device

### Supplementary Information:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful and (2) this device must accept any interference received, including that may cause undesired operation.

Representative Person's Name: ERIC LU

Signature: Eric Lu

Date: May 15, 2008

The **GIGABYTE** logo is exclusively licensed to GIGABYTE UNITED INC. by GIGA-BYTE TECHNOLOGY CO., LTD.

GIGABYTE UNITED INC. is designated by GIGA-BYTE TECHNOLOGY CO., LTD as the exclusive global distributor of GIGABYTE branded motherboards.

## Disclaimer

Information in this manual is protected by copyright laws and is the property of GIGABYTE.

Changes to the specifications and features in this manual may be made by GIGABYTE without prior notice. No part of this manual may be reproduced, copied, translated, transmitted, or published in any form or by any means without GIGABYTE's prior written permission.

## Documentation Classifications

In order to assist in the use of this product, GIGABYTE provides the following types of documentations:

- For quick set-up of the product, read the Quick Installation Guide included with the product.
- For detailed product information, carefully read the User's Manual.
- For instructions on how to use GIGABYTE's unique features, read or download the information on/from the Support\Motherboard\Technology Guide page on our website.

For product-related information, check on our website at:

<http://www.gigabyte.com.tw>

## Identifying Your Motherboard Revision

The revision number on your motherboard looks like this: "REV: X.X." For example, "REV: 1.0" means the revision of the motherboard is 1.0. Check your motherboard revision before updating motherboard BIOS, drivers, or when looking for technical information.

Example:

## Box Contents

- ☒ GA-M750SLI-DS4 motherboard
- ☒ Motherboard driver disk
- ☒ User's Manual
- ☒ Quick Installation Guide
- ☒ One IDE cable and one floppy disk drive cable
- ☒ Four SATA 3Gb/s cables
- ☒ One GC-DGBR2-RH (SLI Bridge)
- ☒ I/O Shield

- The box contents above are for reference only and the actual items shall depend on product package you obtain.  
The box contents are subject to change without notice.
- The motherboard image is for reference only.

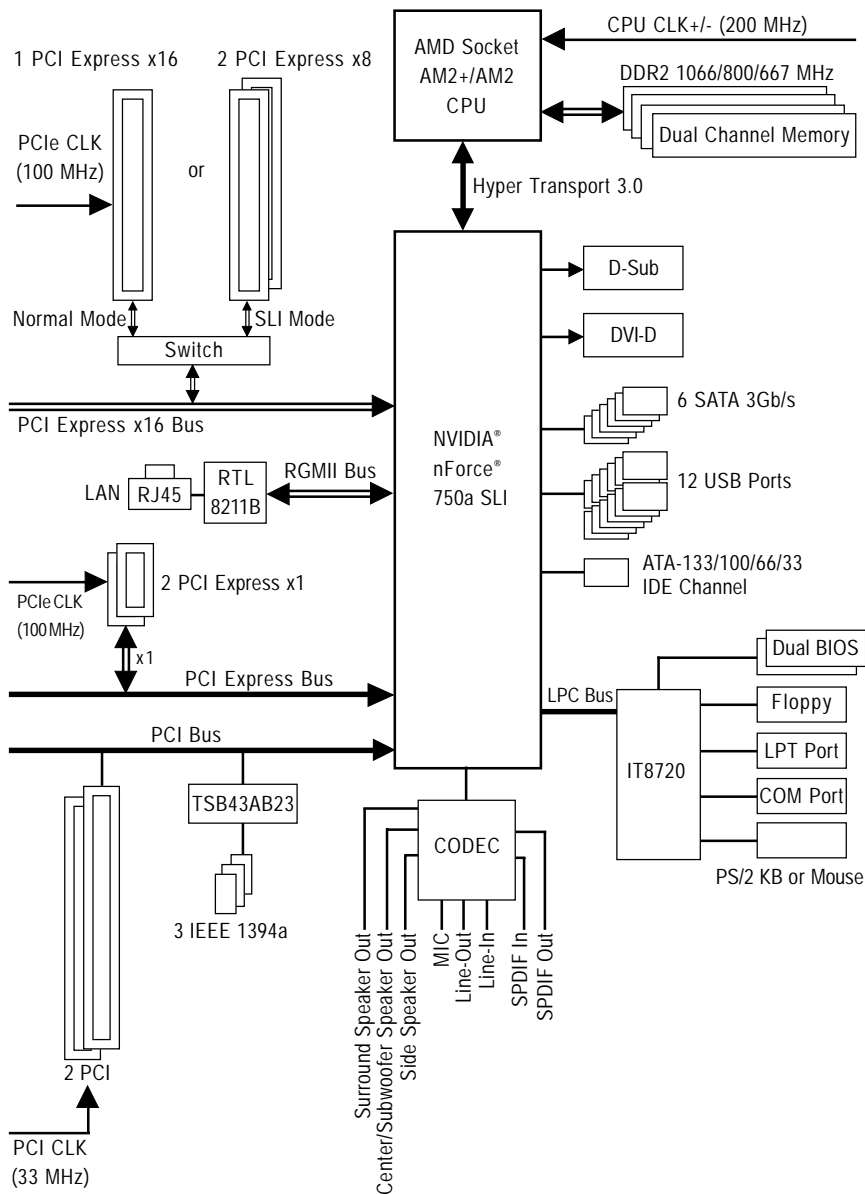

## Optional Items

- ☐ 2-port USB 2.0 bracket (Part No. 12CR1-1UB030-51R)
- ☐ 2-port IEEE 1394a bracket (Part No. 12CF1-1IE008-01R)
- ☐ 2-port SATA power cable (Part No. 12CF1-2SERPW-01R)
- ☐ S/PDIF in cable (Part No. 12CR1-1SPDIN-01R)
- ☐ COM port cable (Part No. 12CF1-1CM001-32R)
- ☐ LPT port cable (Part No. 12CF1-1LP001-01R)

The diagram illustrates the layout of the GA-M750SLI-DS4 motherboard. Key components and their locations are as follows:

- Top Section:**
  - KB\_USB:** Keyboard and USB ports.
  - RCA\_SPDIF:** SPDIF output port.
  - VGA\_DVI:** Video output ports.
  - USB\_1394:** FireWire port.
  - USB\_LAN1:** Ethernet port.
  - AUDIO:** Audio ports.
  - F\_AUDIO:** Front panel audio connector.
  - ATX\_12V\_2X4:** ATX power connector.
  - CPU\_FAN:** CPU fan header.
  - Socket AM2:** CPU socket.
- Right Side:**
  - DDR2\_1 to DDR2\_4:** Four DDR2 memory slots.
  - IDE:** IDE connector.
  - PWR\_FAN:** Power fan header.
  - ATX:** ATX power connector.
  - SATA2\_4, SATA2\_5:** SATA ports.
- Bottom Section:**
  - PCIEX16\_1:** Primary PCI Express slot.
  - PCIEX1\_1, PCIEX1\_2:** PCI Express slots.
  - B\_BIOS, M\_BIOS:** BIOS chips.
  - BATTERY:** CMOS battery.
  - PCIEX8\_1:** PCI Express slot.
  - TSB43AB23:** Thermal sensor.
  - PCI1, PCI2:** PCI slots.
  - IT8720:** Super I/O chip.
  - SPDIF\_OUT:** SPDIF output port.
  - COMA:** COM port.
  - F1\_1394\_1, F1\_1394\_2:** FireWire ports.
  - PWR\_LED:** Power LED header.
  - F\_USB1, F\_USB2, F\_USB3:** Front panel USB ports.
  - SYS\_FAN2:** System fan header.
  - SATA2\_2, SATA2\_3:** SATA ports.
  - SATA2\_0, SATA2\_1:** SATA ports.
- Bottom Labels:**
  - SPDIF IN:** SPDIF input port.
  - LPT:** Parallel port.
  - FDD:** Floppy disk drive.
  - SYS FAN1:** System fan header.
  - F PANEL:** Front panel connector.
  - CLR CMOS:** CMOS clear button.

# Block Diagram

# Chapter 1 Hardware Installation

## 1-1 Installation Precautions

The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the user's manual and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

## 1-2 Product Specifications

CPU	<ul style="list-style-type: none"><li>Support for Socket AM2+/AM2 processors: AMD Phenom™ FX processor/AMD Phenom™ X4 processor/ AMD Phenom™ X3 processor/AMD Athlon™ X2 processor/ AMD Athlon™ processor/AMD Sempron™ X2 processor/ AMD Sempron™ processor (Go to GIGABYTE's website for the latest CPU support list.)</li></ul>
Hyper Transport Bus	<ul style="list-style-type: none"><li>5200/2000 MT/s</li></ul>
Chipset	<ul style="list-style-type: none"><li>NVIDIA® nForce® 750a SLI</li></ul>
Memory	<ul style="list-style-type: none"><li>4 x 1.8V DDR2 DIMM sockets supporting up to 16 GB of system memory <sup>(Note 1)</sup></li><li>Dual channel memory architecture</li><li>Support for DDR2 1066/800/667 MHz memory modules (Go to GIGABYTE's website for the latest memory support list.)</li></ul>

Audio	<ul style="list-style-type: none"><li>Realtek ALC889A codec</li><li>High Definition Audio</li><li>2/4/5.1/7.1-channel</li><li>Support for S/PDIF In/Out</li><li>Support for CD In</li></ul>
LAN	<ul style="list-style-type: none"><li>Realtek 8211B chip (10/100/1000 Mbit)</li></ul>
Expansion Slots	<ul style="list-style-type: none"><li>1 x PCI Express x16 slot <sup>(Note 2)</sup></li><li>1 x PCI Express x8 slot (The PCIEX16_1 and PCIEX8_1 slots conform to PCI Express 2.0 standard.)</li><li>2 x PCI Express x1 slots</li><li>2 x PCI slots</li></ul>
Storage Interface	<ul style="list-style-type: none"><li>NVIDIA® nForce® 750a SLI:<ul style="list-style-type: none"><li>1 x IDE connector supporting ATA-133/100/66/33 and up to 2 IDE devices</li><li>6 x SATA 3Gb/s connectors supporting up to 6 SATA 3Gb/s devices <sup>(Note 3)</sup></li><li>Support for SATA RAID 0, RAID 1, RAID 0+1, RAID 5 and JBOD</li></ul></li><li>ITE IT8720 chip:<ul style="list-style-type: none"><li>1 x floppy disk drive connector supporting up to 1 floppy disk drive</li></ul></li></ul>
IEEE 1394a	<ul style="list-style-type: none"><li>T.I. TSB43AB23 chip</li><li>Up to 3 IEEE 1394a ports (1 on the back panel, 2 via the IEEE 1394a brackets connected to the internal IEEE 1394a headers)</li></ul>
USB	<ul style="list-style-type: none"><li>Integrated in the NVIDIA® nForce® 750a SLI</li><li>Up to 12 USB 2.0/1.1 ports (6 on the back panel, 6 via the USB brackets connected to the internal USB headers)</li></ul>

Internal Connectors	<ul style="list-style-type: none"> <li>♦ 1 x 24-pin ATX main power connector</li> <li>♦ 1 x 8-pin ATX 12V power connector</li> <li>♦ 1 x 4-pin PCIe 12V power connector</li> <li>♦ 1 x floppy disk drive connector</li> <li>♦ 1 x IDE connector</li> <li>♦ 6 x SATA 3Gb/s connectors</li> <li>♦ 1 x CPU fan header</li> <li>♦ 2 x system fan headers</li> <li>♦ 1 x power fan header</li> <li>♦ 1 x front panel header</li> <li>♦ 1 x front panel audio header</li> <li>♦ 1 x CD In connector</li> <li>♦ 1 x S/PDIF In header</li> <li>♦ 1 x S/PDIF Out header</li> <li>♦ 3 x USB 2.0/1.1 headers</li> <li>♦ 2 x IEEE 1394a headers</li> <li>♦ 1 x parallel port header</li> <li>♦ 1 x serial port header</li> <li>♦ 1 x chassis intrusion header</li> <li>♦ 1 x power LED header</li> </ul>
Back Panel	<ul style="list-style-type: none"> <li>♦ 1 x PS/2 keyboard or PS/2 mouse port</li> <li>♦ 1 x optical S/PDIF Out connector</li> <li>♦ 1 x coaxial S/PDIF Out connector</li> <li>♦ 1 x D-Sub port</li> <li>♦ 1 x DVI-D port <sup>(Note 4)</sup></li> <li>♦ 6 x USB 2.0/1.1 ports</li> <li>♦ 1 x IEEE 1394a port</li> <li>♦ 1 x RJ-45 port</li> <li>♦ 6 x audio jacks (Center/Subwoofer Speaker Out/Rear Speaker Out/Side Speaker Out/Line In/Line Out/Microphone)</li> </ul>
I/O Controller	<ul style="list-style-type: none"> <li>♦ iTE IT8720 chip</li> </ul>
Hardware Monitor	<ul style="list-style-type: none"> <li>♦ System voltage detection</li> <li>♦ CPU/System temperature detection</li> <li>♦ CPU/System/Power fan speed detection</li> <li>♦ CPU overheating warning</li> <li>♦ CPU/System/Power fan fail warning</li> <li>♦ CPU/System fan speed control <sup>(Note 5)</sup></li> </ul>

BIOS	<ul style="list-style-type: none"> <li>♦ 2 x 8 Mbit flash</li> <li>♦ Use of licensed AWARD BIOS</li> <li>♦ Support for DualBIOS™</li> <li>♦ PnP 1.0a, DMI 2.0, SM BIOS 2.4, ACPI 1.0b</li> </ul>
Unique Features	<ul style="list-style-type: none"> <li>♦ Support for @BIOS</li> <li>♦ Support for Download Center</li> <li>♦ Support for Q-Flash</li> <li>♦ Support for EasyTune <sup>(Note 6)</sup></li> <li>♦ Support for Xpress Install</li> <li>♦ Support for Xpress Recovery2</li> <li>♦ Support for Virtual Dual BIOS</li> </ul>
Bundled Software	♦ Norton Internet Security (OEM version)
Operating System	♦ Support for Microsoft® Windows® Vista/XP
Form Factor	♦ ATX Form Factor; 30.5cm x 22.4cm

(Note 1) Due to Windows XP/Vista 32-bit operating system limitation, when more than 4 GB of physical memory is installed, the actual memory size displayed will be less than 4 GB.

(Note 2) If you are installing one PCI Express graphics card, be sure to install it in the PCIEX16\_1 slot for optimum performance. When two graphics cards are installed, the PCIEX16\_1 slot will operate at up to x8 mode.

(Note 3) Due to a chipset limitation, the SATA2\_4/SATA2\_5 connectors only support AHCI/RAID mode.

(Note 4) The DVI-D port does not support D-Sub connection by adapter.

(Note 5) Whether the CPU/system fan speed control function is supported will depend on the CPU/system cooler you install.

(Note 6) Available functions in EasyTune may differ by motherboard model.

## 1-3 Installing the CPU and CPU Cooler

Read the following guidelines before you begin to install the CPU:

- Make sure that the motherboard supports the CPU.  
(Go to GIGABYTE's website for the latest CPU support list.)
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Locate the pin one of the CPU. The CPU cannot be inserted if oriented incorrectly.
- Apply an even and thin layer of thermal grease on the surface of the CPU.
- Do not turn on the computer if the CPU cooler is not installed, otherwise overheating and damage of the CPU may occur.
- Set the CPU host frequency in accordance with the CPU specifications. It is not recommended that the system bus frequency be set beyond hardware specifications since it does not meet the standard requirements for the peripherals. If you wish to set the frequency beyond the standard specifications, please do so according to your hardware specifications including the CPU, graphics card, memory, hard drive, etc.

### 1-3-1 Installing the CPU

A. Locate the alignment keys on the motherboard CPU socket and the notches on the CPU.

A Small Triangle Mark  
Denotes Pin One of the  
Socket

AM2 Socket

A Small Triangle Marking  
Denotes CPU Pin One

AM2+AM2 CPU

B. Follow the steps below to correctly install the CPU into the motherboard CPU socket.

**Before installing the CPU, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the CPU.**

**Step 1:**

Completely lift up the CPU socket locking lever.

**Step 2:**

Align the CPU pin one (small triangle marking) with the triangle mark on the CPU socket and gently insert the CPU into the socket. Make sure that the CPU pins fit perfectly into their holes. Once the CPU is positioned into its socket, place one finger down on the middle of the CPU, lowering the locking lever and latching it into the fully locked position.

Do not force the CPU into the CPU socket. The CPU cannot fit in if oriented incorrectly. Adjust the CPU orientation if this occurs.

### 1-3-2 Installing the CPU Cooler

Follow the steps below to correctly install the CPU cooler on the CPU. (The following procedure uses the GIGABYTE cooler as the example.)

**Step 1:**

Apply an even and thin layer of thermal grease on the surface of the installed CPU.

**Step 2:**

Place the CPU cooler on the CPU.

**Step 3:**

Hook the CPU cooler clip to the mounting lug on one side of the retention frame. On the other side, push straight down on the CPU cooler clip to hook it to the mounting lug on the retention frame.

**Step 4:**

Turn the cam handle from the left side to the right side (as the picture above shows) to lock into place. (Refer to your CPU cooler installation manual for instructions on installing the cooler.)

**Step 5:**

Finally, attach the power connector of the CPU cooler to the CPU fan header (CPU\_FAN) on the motherboard.

Use extreme care when removing the CPU cooler because the thermal grease/tape between the CPU cooler and CPU may adhere to the CPU. Inadequately removing the CPU cooler may damage the CPU.

# 1-4 Installing the Memory

Read the following guidelines before you begin to install the memory:

- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used. (Go to GIGABYTE's website for the latest memory support list.)
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

## 1-4-1 Dual Channel Memory Configuration

This motherboard provides four DDR2 memory sockets and supports Dual Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory. Enabling Dual Channel memory mode will double the original memory bandwidth.

The four DDR2 memory sockets are divided into two channels and each channel has two memory sockets as following:

- ▶▶ Channel 0: DDR2\_1, DDR2\_3
- ▶▶ Channel 1: DDR2\_2, DDR2\_4

▶▶ Dual Channel Memory Configurations Table

	DDR2_1	DDR2_2	DDR2_3	DDR2_4
Two Modules	DS/SS	DS/SS	--	--
	--	--	DS/SS	DS/SS
Four Modules	DS/SS	DS/SS	DS/SS	DS/SS

(SS=Single-Sided, DS=Double-Sided, "--"=No Memory)

If two memory modules are to be installed, it is recommended that you install them in the DDR2\_1 and DDR2\_2 sockets.

Due to CPU limitation, read the following guidelines before installing the memory in Dual Channel mode.

1. Dual Channel mode cannot be enabled if only one DDR2 memory module is installed.
2. When enabling Dual Channel mode with two or four memory modules, it is recommended that memory of the same capacity, brand, speed, and chips be used and installed in the same colored DDR2 sockets for optimum performance.

## 1-4-2 Installing a Memory

Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module.

DDR2 DIMMs are not compatible to DDR DIMMs. Be sure to install DDR2 DIMMs on this motherboard.

A DDR2 memory module has a notch, so it can only fit in one direction. Follow the steps below to correctly install your memory modules in the memory sockets.

### Step 1:

Note the orientation of the memory module. Spread the retaining clips at both ends of the memory socket. Place the memory module on the socket. As indicated in the picture on the left, place your fingers on the top edge of the memory, push down on the memory and insert it vertically into the memory socket.

### Step 2:

The clips at both ends of the socket will snap into place when the memory module is securely inserted.

## 1-5 Installing an Expansion Card

Read the following guidelines before you begin to install an expansion card:

- Make sure the motherboard supports the expansion card. Carefully read the manual that came with your expansion card.
- Always turn off the computer and unplug the power cord from the power outlet before installing an expansion card to prevent hardware damage.

Follow the steps below to correctly install your expansion card in the expansion slot.

1. Locate an expansion slot that supports your card. Remove the metal slot cover from the chassis back panel.
2. Align the card with the slot, and press down on the card until it is fully seated in the slot.
3. Make sure the metal contacts on the card are completely inserted into the slot.
4. Secure the card's metal bracket to the chassis back panel with a screw.
5. After installing all expansion cards, replace the chassis cover(s).
6. Turn on your computer. If necessary, go to BIOS Setup to make any required BIOS changes for your expansion card(s).
7. Install the driver provided with the expansion card in your operating system.

Example: Installing and Removing a PCI Express Graphics Card:

- **Installing a Graphics Card:**  
Gently push down on the top edge of the card until it is fully inserted into the PCI Express slot. Make sure the card is securely seated in the slot and does not rock.

- **Removing the Card:**  
Press the white latch at the end of the PCI Express slot to release the card and then pull the card straight up from the slot.

- The motherboard provides a PCIe\_12V power connector, which can supply extra power to the onboard PCI Express slots. When you install two graphics cards, connect the power cable from your power supply to this connector.

## 1-6 Setup of an SLI (Scalable Link Interface) Configuration

The NVIDIA® nForce® 750a SLI chipset offers blistering graphics performance with the ability to bridge two NVIDIA SLI-ready PCI Express™ graphics cards! This section provides instructions on configuring an SLI system.

### A. Before you begin--

#### 1. Power Requirements:

Before installation, assure that the power supply you use is able to provide sufficient power to fully support an SLI configuration and other components in your system. We recommend a power supply that provides at least 20A 5V and 12V current and a minimum of 400W wattage. Note that the exact power requirements will depend on your overall system configurations.

#### 2. Supported Operation Systems:

Only Windows XP and Vista operating systems are currently supported by the NVIDIA® SLI technology.

#### 3. Installation Notices:

- If you want to set up a single graphics card system, we recommend installing the graphics card on the PCIEX16\_1 slot.
- To enable SLI function, install two SLI-ready graphics cards into the PCIEX16\_1 and PCIEX8\_1 slots. (Using graphics cards of identical brand and chips, for example, GIGABYTE GV-NX85T256H is recommended)

## B. Connecting Two Graphics Cards:

### Step 1:

Observe the steps in "1-5 Installing an Expansion Card" and install two SLI-ready graphics cards of the same model on the PCIEX16\_1 and PCIEX8\_1 slots.

### Step 2:

Insert the SLI bridge (the GC-DGBR2-RH) in the SLI gold edge connectors on top of both cards. Make sure the two mini female slots on the bridge connector securely fit onto the SLI gold edge connectors of both cards.

Female slots on the bridge connector

Gold edge connector on the top of the graphics card

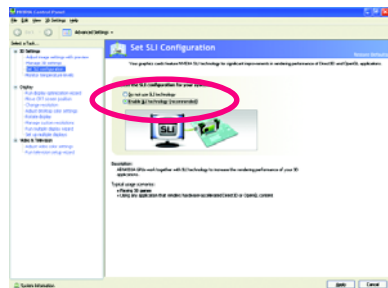

### Step 4:

Plug the display cable into the graphics card on the PCIEX16\_1 slot. (Note: To enable the SLI function, you must plug the display cable into the graphics card on the PCIEX16\_1 slot.)

## C. Configuring the Graphics Card Driver:

After installing graphics card driver in operating system, go to the NVIDIA Control Panel. Browse to the SLI configuration screen. Ensure SLI mode is enabled. (The SLI configuration screen may differ by driver version.)

Procedure for enabling SLI technology may slightly differ by graphics cards. Refer to the manual that came with your graphics cards for more information about enabling SLI technology.

# 1-7 Back Panel Connectors

- a USB Port**  
The USB port supports the USB 2.0/1.1 specification. Use this port for USB devices such as an USB keyboard/mouse, USB printer, USB flash drive and etc.
- b PS/2 Keyboard or PS/2 Mouse Port**  
Use this port to connect a PS/2 keyboard or PS/2 mouse.
- c Optical S/PDIF Out Connector**  
This connector provides digital audio out to an external audio system that supports digital optical audio. Before using this feature, ensure that your audio system provides an optical digital audio in connector.
- d Coaxial S/PDIF Out Connector**  
This connector provides digital audio out to an external audio system that supports digital coaxial audio. Before using this feature, ensure that your audio system provides a coaxial digital audio in connector.
- e D-Sub Port**  
The D-Sub port supports a 15-pin D-Sub connector. Connect a monitor that supports D-Sub connection to this port.
- f DVI-D Port**  
The DVI-D port supports DVI-D specifictation. Connect a monitor that supports DVI-D connection to this port.
- g IEEE 1394a Port**  
The IEEE 1394 port supports the IEEE 1394a specification, featuring high speed, high bandwidth and hotplug capabilities. Use this port for an IEEE 1394a device.
- h RJ-45 LAN Port**  
The Gigabit Ethernet LAN port provides Internet connection at up to 1 Gbps data rate. The following describes the states of the LAN port LEDs.

Connection/

Speed LED

Activity LED

LAN Port

Connection/Speed LED:

State	Description
Orange	1 Gbps data rate
Green	100 Mbps data rate
Off	10 Mbps data rate

Activity LED:

State	Description
Blinking	Data transmission or receiving is occurring
Off	No data transmission or receiving is occurring

CAUTION

- When removing the cable connected to a back panel connector, first remove the cable from your device and then remove it from the motherboard.
- When removing the cable, pull it straight out from the connector. Do not rock it side to side to prevent an electrical short inside the cable connector.

❶ **Center/Subwoofer Speaker Out Jack (Orange)**

Use this audio jack to connect center/subwoofer speakers in a 5.1/7.1-channel audio configuration.

❷ **Rear Speaker Out Jack (Black)**

Use this audio jack to connect rear speakers in a 4/5.1/7.1-channel audio configuration.

❸ **Side Speaker Out Jack (Gray)**

Use this audio jack to connect side speakers in a 7.1-channel audio configuration.

❹ **Line In Jack (Blue)**

The default line in jack. Use this audio jack for line in devices such as an optical drive, walkman, etc.

❺ **Line Out Jack (Green)**

The default line out jack. Use this audio jack for a headphone or 2-channel speaker. This jack can be used to connect front speakers in a 4/5.1/7.1-channel audio configuration.

❻ **Mic In Jack (Pink)**

The default Mic in jack. Microphones must be connected to this jack.

In addition to the default speakers settings, the ❶~❺ audio jacks can be reconfigured to perform different functions via the audio software. Only microphones still **MUST** be connected to the default Mic in jack (❻). Refer to the instructions on setting up a 2/4/5.1/7.1-channel audio configuration in Chapter 5, "Configuring 2/4/5.1/7.1-Channel Audio."

## 1-8 Internal Connectors

1) ATX_12V_2X4	12) F_AUDIO
2) ATX	13) CD_IN
3) CPU_FAN	14) SPDIF_IN
4) SYS_FAN1 / SYS_FAN2	15) SPDIF_OUT
5) PWR_FAN	16) F1_1394_1 / F1_1394_2
6) PCIe_12V	17) F_USB1 / F_USB2 / F_USB3
7) FDD	18) COMA
8) IDE	19) LPT
9) SATA2_0 / 1 / 2 / 3 / 4 / 5	20) CLR_CMOS
10) PWR_LED	21) CI
11) F_PANEL	22) BATTERY

CAUTION

Read the following guidelines before connecting external devices:

- First make sure your devices are compliant with the connectors you wish to connect.
- Before installing the devices, be sure to turn off the devices and your computer. Unplug the power cord from the power outlet to prevent damage to the devices.
- After installing the device and before turning on the computer, make sure the device cable has been securely attached to the connector on the motherboard.

## 1/2) ATX\_12V\_2X4/ATX (2x4 12V Power Connector and 2x12 Main Power Connector)

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, first make sure the power supply is turned off and all devices are properly installed. The power connector possesses a foolproof design. Connect the power supply cable to the power connector in the correct orientation. The 12V power connector mainly supplies power to the CPU. If the 12V power connector is not connected, the computer will not start.

- To meet expansion requirements, it is recommended that a power supply that can withstand high power consumption be used (400W or greater). If a power supply is used that does not provide the required power, the result can lead to an unstable or unbootable system.
- The power connectors are compatible with power supplies with 2x2 12V and 2x10 power connectors. When using a power supply providing a 2x4 12V and a 2x12 power connector, remove the protective covers from the 12V power connector and the main power connector on the motherboard. Do not insert the power supply cables into pins under the protective covers when using a power supply providing a 2x2 12V and a 2x10 power connector.

ATX\_12V\_2X4:

Pin No.	Definition
1	GND (Only for 2x4 pin 12V)
2	GND (Only for 2x4 pin 12V)
3	GND
4	GND
5	+12V (Only for 2x4 pin 12V)
6	+12V (Only for 2x4 pin 12V)
7	+12V
8	+12V

ATX:

Pin No.	Definition	Pin No.	Definition
1	3.3V	13	3.3V
2	3.3V	14	-12V
3	GND	15	GND
4	+5V	16	PS_ON(soft On/Off)
5	GND	17	GND
6	+5V	18	GND
7	GND	19	GND
8	Power Good	20	-5V
9	5V SB(stand by +5V)	21	+5V
10	+12V	22	+5V
11	+12V (Only for 2x12 pin ATX)	23	+5V (Only for 2x12 pin ATX)
12	3.3V (Only for 2x12 pin ATX)	24	GND (Only for 2x12 pin ATX)

### 3/4/5) CPU\_FAN / SYS\_FAN1 / SYS\_FAN2 / PWR\_FAN (Fan Headers)

The motherboard has a 4-pin CPU fan header (CPU\_FAN), a 3-pin (SYS\_FAN1) and a 4-pin (SYS\_FAN2) system fan header, and a 3-pin power fan header (PWR\_FAN). Each fan header supplies a +12V power voltage and possesses a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation. Most fans are designed with color-coded power connector wires. A red power connector wire indicates a positive connection and requires a +12V voltage. The black connector wire is the ground wire. The motherboard supports CPU fan speed control, which requires the use of a CPU fan with fan speed control design. For optimum heat dissipation, it is recommended that a system fan be installed inside the chassis.

CPU\_FAN:

Pin No.	Definition
1	GND
2	+12V / Speed Control
3	Sense
4	Speed Control

SYS\_FAN2:

Pin No.	Definition
1	GND
2	+12V / Speed Control
3	Sense
4	+5V

SYS\_FAN1/PWR\_FAN:

Pin No.	Definition
1	GND
2	+12V
3	Sense

- Be sure to connect fan cables to the fan headers to prevent your CPU and system from overheating. Overheating may result in damage to the CPU or the system may hang.
- These fan headers are not configuration jumper blocks. Do not place a jumper cap on the headers.

### 6) PCIe\_12V (Power Connector)

This power connector can supply extra power to the PCI Express slots on the motherboard. Connect the power supply cable to this connector when using two graphics cards. Failure to do so may lead to an unstable system.

Pin No.	Definition
1	NC
2	GND
3	GND
4	+12V

## 7) FDD (Floppy Disk Drive Connector)

This connector is used to connect a floppy disk drive. The types of floppy disk drives supported are: 360 KB, 720 KB, 1.2 MB, 1.44 MB, and 2.88 MB. Before connecting a floppy disk drive, be sure to locate pin 1 of the connector and the floppy disk drive cable. The pin 1 of the cable is typically designated by a stripe of different color.

## 8) IDE (IDE Connector)

The IDE connector supports up to two IDE devices such as hard drives and optical drives. Before attaching the IDE cable, locate the foolproof groove on the connector. If you wish to connect two IDE devices, remember to set the jumpers and the cabling according to the role of the IDE devices (for example, master or slave). (For information about configuring master/slave settings for the IDE devices, read the instructions from the device manufacturers.)

## 9) SATA2\_0/1/2/3/4/5 (SATA 3Gb/s Connectors)

The SATA connectors conform to SATA 3Gb/s standard and are compatible with SATA 1.5Gb/s standard. Each SATA connector supports a single SATA device. The NVIDIA nForce 750a SLI controller supports RAID 0, RAID 1, RAID 0+1 and RAID 5. Refer to Chapter 5, "Configuring SATA Hard Drive(s)," for instructions on configuring a RAID array.

SATA2\_0 SATA2\_1

Pin No.	Definition
1	GND
2	TXP
3	TXN
4	GND
5	RXN
6	RXP
7	GND

Please connect the L-shaped end of the SATA 3Gb/s cable to your SATA hard drive.

- Due to a chipset limitation, the SATA2\_4/SATA2\_5 connectors only support AHCI/RAID mode.
- A RAID 0 or RAID 1 configuration requires at least two hard drives. If more than two hard drives are to be used, the total number of hard drives must be an even number.
- A RAID 5 configuration requires at least three hard drives. (The total number of hard drives does not have to be an even number.)
- A RAID 0+1 configuration requires at least four hard drives and the total number of hard drives must be an even number.

## 10) PWR\_LED (System Power LED Header)

This header can be used to connect a system power LED on the chassis to indicate system power status. The LED is on when the system is operating. The LED keeps blinking when the system is in S1 sleep state. The LED is off when the system is in S3/S4 sleep state or powered off (S5).

Pin No.	Definition
1	MPD+
2	MPD-
3	MPD-

System Status	LED
S0	On
S1	Blinking
S3/S4/S5	Off

## 11) F\_PANEL (Front Panel Header)

Connect the power switch, reset switch, speaker and system status indicator on the chassis front panel to this header according to the pin assignments below. Note the positive and negative pins before connecting the cables.

- MSG (Message/Power/Sleep LED, Yellow):

System Status	LED
S0	On
S1	Blinking
S3/S4/S5	Off

Connects to the power status indicator on the chassis front panel. The LED is on when the system is operating. The LED keeps blinking when the system is in S1 sleep state. The LED is off when the system is in S3/S4 sleep state or powered off (S5).

- PW (Power Switch, Red):

Connects to the power switch on the chassis front panel. You may configure the way to turn off your system using the power switch (refer to Chapter 2, "BIOS Setup," "Power Management Setup," for more information).

- SPEAK (Speaker, Orange):

Connects to the speaker on the chassis front panel. The system reports system startup status by issuing a beep code. One single short beep will be heard if no problem is detected at system startup. If a problem is detected, the BIOS may issue beeps in different patterns to indicate the problem. Refer to Chapter 5, "Troubleshooting," for information about beep codes.

- HD (Hard Drive Activity LED, Blue)

Connects to the hard drive activity LED on the chassis front panel. The LED is on when the hard drive is reading or writing data.

- RES (Reset Switch, Green):

Connects to the reset switch on the chassis front panel. Press the reset switch to restart the computer if the computer freezes and fails to perform a normal restart.

- NC (Purple):

No connection

The front panel design may differ by chassis. A front panel module mainly consists of power switch, reset switch, power LED, hard drive activity LED, speaker and etc. When connecting your chassis front panel module to this header, make sure the wire assignments and the pin assignments are matched correctly.

12) F\_AUDIO (Front Panel Audio Header)

The front panel audio header supports Intel High Definition audio (HD) and AC'97 audio. You may connect your chassis front panel audio module to this header. Make sure the wire assignments of the module connector match the pin assignments of the motherboard header. Incorrect connection between the module connector and the motherboard header will make the device unable to work or even damage it.

For HD Front Panel Audio:

Pin No.	Definition
1	MIC2_L
2	GND
3	MIC2_R
4	-ACZ_DET
5	LINE2_R
6	GND
7	FAUDIO_ID
8	No Pin
9	LINE2_L
10	GND

For AC'97 Front Panel Audio:

Pin No.	Definition
1	MIC
2	GND
3	MIC Power
4	NC
5	Line Out (R)
6	NC
7	NC
8	No Pin
9	Line Out (L)
10	NC

- The front panel audio header supports HD audio by default. If your chassis provides an AC'97 front panel audio module, refer to the instructions on how to activate AC'97 functionality via the audio software in Chapter 5, "Configuring 2/4/5.1/7.1-Channel Audio."
- When using an AC'97 front panel audio module, you can use either the front or the back panel audio connectors, but not both at the same time.
- Some chassis provide a front panel audio module that has separated connectors on each wire instead of a single plug. For information about connecting the front panel audio module that has different wire assignments, please contact the chassis manufacturer.

13) CD\_IN (CD In Connector, Black)

You may connect the audio cable that came with your optical drive to the header.

Pin No.	Definition
1	CD-L
2	GND
3	GND
4	CD-R

14) SPDIF\_IN (S/PDIF In Header, Red)

This header supports digital S/PDIF in and can connect to an audio device that supports digital audio out via an optional S/PDIF in cable. For purchasing the optional S/PDIF in cable, please contact the local dealer.

Pin No.	Definition
1	Power
2	SPDIFI
3	GND

15) SPDIF\_OUT (S/PDIF Out Header)

This header supports digital S/PDIF out and connects a S/PDIF digital audio cable (provided by expansion cards) for digital audio output from your motherboard to certain expansion cards like graphics cards and sound cards. For example, some graphics cards may require you to use a S/PDIF digital audio cable for digital audio output from your motherboard to your graphics card if you wish to connect an HDMI display to the graphics card and have digital audio output from the HDMI display at the same time. For information about connecting the S/PDIF digital audio cable, carefully read the manual for your expansion card.

Pin No.	Definition
1	SPDIFO
2	GND

### 16) F1\_1394\_1/F1\_1394\_2 (IEEE 1394a Headers, Gray)

The headers conform to IEEE 1394a specification. Each IEEE 1394a header can provide one IEEE 1394a port via an optional IEEE 1394a bracket. For purchasing the optional IEEE 1394a bracket, please contact the local dealer.

Pin No.	Definition
1	TPA+
2	TPA-
3	GND
4	GND
5	TPB+
6	TPB-
7	Power (12V)
8	Power (12V)
9	No Pin
10	GND

- Do not plug the USB bracket cable into the IEEE 1394a header.
- Prior to installing the IEEE 1394a bracket, be sure to turn off your computer and unplug the power cord from the power outlet to prevent damage to the IEEE 1394a bracket.
- To connect an IEEE 1394a device, attach one end of the device cable to your computer and then attach the other end of the cable to the IEEE 1394a device. Ensure that the cable is securely connected.

### 17) F\_USB1/F\_USB2/F\_USB3 (USB Headers, Yellow)

The headers conform to USB 2.0/1.1 specification. Each USB header can provide two USB ports via an optional USB bracket. For purchasing the optional USB bracket, please contact the local dealer.

Pin No.	Definition
1	Power (5V)
2	Power (5V)
3	USB DX-
4	USB DY-
5	USB DX+
6	USB DY+
7	GND
8	GND
9	No Pin
10	NC

- Do not plug the IEEE 1394a bracket (2x5-pin) cable into the USB header.
- Prior to installing the USB bracket, be sure to turn off your computer and unplug the power cord from the power outlet to prevent damage to the USB bracket.

## 18) COMA (Serial Port Header, White)

The COMA header can provide one serial port via an optional COM port cable. For purchasing the optional COM port cable, please contact the local dealer.

Pin No.	Definition
1	NDCDA-
2	NSIN A
3	NSOUT A
4	NDTRA-
5	GND
6	NDSRA-
7	NRTS A-
8	NCTS A-
9	NR1 A-
10	No Pin

## 19) LPT (Parallel Port Header)

The LPT header can provide one parallel port via an optional LPT port cable. For purchasing the optional LPT port cable, please contact the local dealer.

Pin No.	Definition	Pin No.	Definition
1	STB-	14	GND
2	AFD-	15	PD6
3	PD0	16	GND
4	ERR-	17	PD7
5	PD1	18	GND
6	INIT-	19	ACK-
7	PD2	20	GND
8	SLIN-	21	BUSY
9	PD3	22	GND
10	GND	23	PE
11	PD4	24	No Pin
12	GND	25	SLCT
13	PD5	26	GND

## 20) CLR\_CMOS (Clearing CMOS Jumper)

Use this jumper to clear the CMOS values (e.g. date information and BIOS configurations) and reset the CMOS values to factory defaults. To clear the CMOS values, place a jumper cap on the two pins to temporarily short the two pins or use a metal object like a screwdriver to touch the two pins for a few seconds.

Open: Normal

Short: Clear CMOS Values

- Always turn off your computer and unplug the power cord from the power outlet before clearing the CMOS values.
- After clearing the CMOS values and before turning on your computer, be sure to remove the jumper cap from the jumper. Failure to do so may cause damage to the motherboard.
- After system restart, go to BIOS Setup to load factory defaults (select **Load Optimized Defaults**) or manually configure the BIOS settings (refer to Chapter 2, "BIOS Setup," for BIOS configurations).

## 21) CI (Chassis Intrusion Header)

This motherboard provides a chassis detection feature that detects if the chassis cover has been removed. This function requires a chassis with chassis intrusion detection design.

1

Pin No.	Definition
1	Signal
2	GND

## 22) BATTERY

The battery provides power to keep the values (such as BIOS configurations, date, and time information) in the CMOS when the computer is turned off. Replace the battery when the battery voltage drops to a low level, or the CMOS values may not be accurate or may be lost.

You may clear the CMOS values by removing the battery:

1. Turn off your computer and unplug the power cord.
2. Gently remove the battery from the battery holder and wait for one minute.  
(Or use a metal object like a screwdriver to touch the positive and negative terminals of the battery holder, making them short for 5 seconds.)
3. Replace the battery.
4. Plug in the power cord and restart your computer.

- Always turn off your computer and unplug the power cord before replacing the battery.
- Replace the battery with an equivalent one. Danger of explosion if the battery is replaced with an incorrect model.
- Contact the place of purchase or local dealer if you are not able to replace the battery by yourself or uncertain about the battery model.
- When installing the battery, note the orientation of the positive side (+) and the negative side (-) of the battery (the positive side should face up).
- Used batteries must be handled in accordance with local environmental regulations.

## Chapter 2 BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the CMOS on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters and loading operating system, etc. BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <Delete> key during the POST when the power is turned on. To see more advanced BIOS Setup menu options, you can press <Ctrl> + <F1> in the main menu of the BIOS Setup program.

To upgrade the BIOS, use either the GIGABYTE Q-Flash or @BIOS utility.

- Q-Flash allows the user to quickly and easily upgrade or back up BIOS without entering the operating system.
- @BIOS is a Windows-based utility that searches and downloads the latest version of BIOS from the Internet and updates the BIOS.

For instructions on using the Q-Flash and @BIOS utilities, refer to Chapter 4, "BIOS Update Utilities."

- Because BIOS flashing is potentially risky, if you do not encounter problems using the current version of BIOS, it is recommended that you not flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
- BIOS will emit a beep code during the POST. Refer to Chapter 5, "Troubleshooting," for the beep codes description.
- It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the "Load Optimized Defaults" section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 1 for how to clear the CMOS values.)

## 2-1 Startup Screen

The following screens may appear when the computer boots.

### A. The LOGO Screen (Default)

Function Keys

### B. The POST Screen

Function Keys

#### Function Keys:

##### <TAB>: POST Screen

Press the <Tab> key to show the BIOS POST screen. To show the BIOS POST screen at system startup, refer to the instructions on the **Full Screen LOGO Show** item on page 46.

##### <DEL>: BIOS Setup

Press the <Delete> key to enter BIOS Setup.

##### <F9>: Xpress Recovery2

If you have ever entered Xpress Recovery2 to back up hard drive data using the driver disk, the <F9> key can be used for subsequent access to XpressRecovery2 during the POST. For more information, refer to Chapter 4, "Xpress Recovery2."

##### <F12>: Boot Menu

Boot Menu allows you to set the first boot device without entering BIOS Setup. In Boot Menu, use the up arrow key <↑> or the down arrow key <↓> to select the first boot device, then press <Enter> to accept. To exit Boot Menu, press <Esc>. The system will directly boot from the device configured in Boot Menu.

Note: The setting in Boot Menu is effective for one time only. After system restart, the device boot order will still be based on BIOS Setup settings. You can access Boot Menu again to change the first boot device setting as needed.

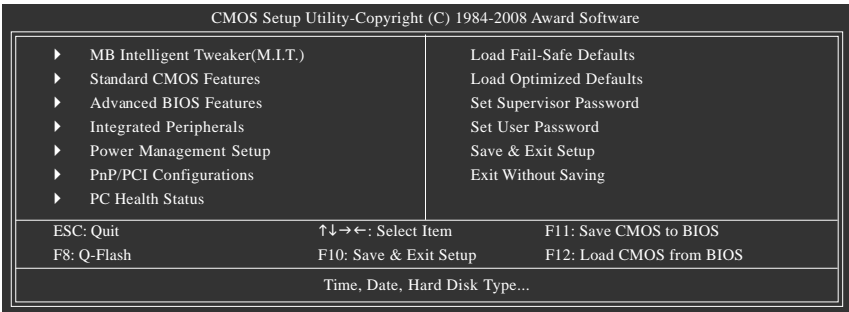

##### <End>: Q-Flash

Press the <End> key to access the Q-Flash utility directly without having to enter BIOS Setup first.

## 2-2 The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter a sub-menu.

(Sample BIOS Version: D28)

### BIOS Setup Program Function Keys

<↑><↓><←><→>	Move the selection bar to select an item
<Enter>	Execute command or enter the submenu
<Esc>	Main Menu: Exit the BIOS Setup program Submenus: Exit current submenu
<Page Up>	Increase the numeric value or make changes
<Page Down>	Decrease the numeric value or make changes
<F1>	Show descriptions of the function keys
<F2>	Move cursor to the Item Help block on the right (submenus only)
<F5>	Restore the previous BIOS settings for the current submenus
<F6>	Load the Fail-Safe BIOS default settings for the current submenus
<F7>	Load the Optimized BIOS default settings for the current submenus
<F8>	Access the Q-Flash utility
<F9>	Display system information
<F10>	Save all the changes and exit the BIOS Setup program
<F11>	Save CMOS to BIOS
<F12>	Load CMOS from BIOS

### Main Menu Help

The onscreen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

### Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

- If you do not find the settings you want in the Main Menu or a submenu, press <Ctrl>+<F1> to access more advanced options.
- When the system is not stable as usual, select the **Load Optimized Defaults** item to set your system to its defaults.
- The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

## ■ The Functions of the <F11> and <F12> keys (For the Main Menu Only)

### ▶ F11 : Save CMOS to BIOS

This function allows you to save the current BIOS settings to a profile. You can create up to 8 profiles (Profile 1-8) and name each profile. First enter the profile name (to erase the default profile name, use the SPACE key) and then press <Enter> to complete.

### ▶ F12 : Load CMOS from BIOS

If your system becomes unstable and you have loaded the BIOS default settings, you can use this function to load the BIOS settings from a profile created before, without the hassles of reconfiguring the BIOS settings. First select the profile you wish to load, then press <Enter> to complete.

## ■ MB Intelligent Tweaker(M.I.T.)

Use this menu to configure the clock, frequency and voltages of your CPU, memory, etc.

## ■ Standard CMOS Features

Use this menu to configure the system time and date, hard drive types, floppy disk drive types, and the type of errors that stop the system boot, etc.

## ■ Advanced BIOS Features

Use this menu to configure the device boot order, advanced features available on the CPU, and the primary display adapter.

## ■ Integrated Peripherals

Use this menu to configure all peripheral devices, such as IDE, SATA, USB, integrated audio, and integrated LAN, etc.

## ■ Power Management Setup

Use this menu to configure all the power-saving functions.

## ■ PnP/PCI Configurations

Use this menu to configure the system's PCI & PnP resources.

## ■ PC Health Status

Use this menu to see information about autodetected system/CPU temperature, system voltage and fan speed, etc.

## ■ Load Fail-Safe Defaults

Fail-Safe defaults are factory settings for the most stable, minimal-performance system operations.

## ■ Load Optimized Defaults

Optimized defaults are factory settings for optimal-performance system operations.

## ■ Set Supervisor Password

Change, set, or disable password. It allows you to restrict access to the system and BIOS Setup. A supervisor password allows you to make changes in BIOS Setup.

## ■ Set User Password

Change, set, or disable password. It allows you to restrict access to the system and BIOS Setup. An user password only allows you to view the BIOS settings but not to make changes.

## ■ Save & Exit Setup

Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

## ■ Exit Without Saving

Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

## 2-3 MB Intelligent Tweaker(M.I.T.)

- Whether the system will work stably with the overclock/overvoltage settings you made is dependent on your overall system configurations. Incorrectly doing overclock/overvoltage may result in damage to CPU, chipset, or memory and reduce the useful life of these components. This page is for advanced users only and we recommend you not to alter the default settings to prevent system instability or other unexpected results. (Inadequately altering the settings may result in system's failure to boot. If this occurs, clear the CMOS values and reset the board to default values.)
- When the **System Voltage Optimized** item blinks in red, it is recommended that you set the **System Voltage Control** item to **Auto** to optimize the system voltage settings.

### CPU Frequency

Allows you to manually set the CPU host frequency. The adjustable range is from 200 MHz to 600 MHz. **Important** It is highly recommended that the CPU frequency be set in accordance with the CPU specifications.

### HT Link Frequency

Allows you to manually set the frequency for the HT Link between the CPU and chipset.

- Auto BIOS will automatically adjust the HT Link Frequency. (Default)
- 200 MHz~1.8 GHz Sets HT Link Frequency to 200 MHz~1.8 GHz.

### PCIE Clock

Allows you to manually set the PCIE clock frequency. The adjustable range is from 100 MHz to 200 MHz. (Default: 100)

### CPU Clock Ratio

Allows you to alter the clock ratio for the installed CPU. The adjustable range is dependent on the CPU being used. (Default: Auto)

(Note) This item appears only if you install a CPU that supports this feature.

## Memory Controller Freq. <sup>(Note)</sup>

Allows you to alter the memory controller frequency for the installed CPU. The adjustable range is dependent on the CPU being used. (Default: Auto)

## DRAM Configuration

## SLI-Ready Memory

Allows you to enable or disable the SLI-Ready (EPP) memory function. (Default: Disabled)

## Set Memory Clock

Determines whether to manually set the memory clock. **Auto** lets BIOS automatically set the memory clock as required. **Manual** allows the memory clock control item below to be configurable. (Default: Auto)

## Memory Clock

This option is configurable only when **Set Memory Clock** is set to **Manual**.

When you use an AM2 CPU:

- ▶▶ DDR 400      Sets Memory Clock to DDR 400.
- ▶▶ DDR 533      Sets Memory Clock to DDR 533.
- ▶▶ DDR 667      Sets Memory Clock to DDR 667.
- ▶▶ DDR 800      Sets Memory Clock to DDR 800.

When you use an AM2+ CPU:

- ▶▶ x2.00      Sets Memory Clock to x2.00.
- ▶▶ x2.66      Sets Memory Clock to x2.66.
- ▶▶ x3.33      Sets Memory Clock to x3.33.
- ▶▶ x4.00      Sets Memory Clock to x4.00.
- ▶▶ x5.33      Sets Memory Clock to x5.33.

(Note) This item appears only if you install a CPU that supports this feature.

☞ **DCTs Mode** <sup>(Note)</sup>

Allows you to set memory control mode.

- Ganged        Sets memory control mode to single dual-channel.
- Unganged     Sets memory control mode to single-channel. (Default)

☞ **DDRII Timing Items**

**Manual** allows all DDRII Timing items below to be configurable.

Options are: Auto (default), Manual.

☞ **CAS# latency**

Options are: Auto (default), 3T~7T.

☞ **RAS to CAS R/W Delay**

Options are: Auto (default), 3T~6T.

☞ **Row Precharge Time**

Options are: Auto (default), 3T~6T.

☞ **Minimum RAS Active Time**

Options are: Auto (default), 5T~18T.

☞ **1T/2T Command Timing**

Options are: 1T (default), 2T.

☞ **TwTr Command Delay**

Options are: Auto (default), 1T~3T.

☞ **Trfc0 for DIMM1**

Options are: 75ns, 105ns (default), 127.5ns, 195ns, 327.5ns.

☞ **Trfc2 for DIMM2**

Options are: 75ns, 105ns, 127.5ns, 195ns, 327.5ns.

☞ **Trfc1 for DIMM3**

Options are: 75ns, 105ns, 127.5ns, 195ns, 327.5ns.

☞ **Trfc3 for DIMM4**

Options are: 75ns, 105ns, 127.5ns, 195ns, 327.5ns.

☞ **Write Recovery Time**

Options are: Auto (default), 3T~6T.

☞ **Precharge Time**

Options are: Auto (default), 2T, 3T.

☞ **Row Cycle Time**

Options are: Auto (default), 11T~26T.

☞ **RAS to RAS Delay**

Options are: Auto (default), 2T~5T.

\*\*\*\*\* **System Voltage Optimized** \*\*\*\*\*

☞ **System Voltage Control**

Determines whether to manually set the system voltages. **Auto** lets BIOS automatically set the system voltages as required. **Manual** allows all voltage control items below to be configurable. (Default: Auto)

### ☞ **DDR2 Voltage Control**

Allows you to set memory voltage.

- » Normal                      Supplies the memory voltage as required. (Default)
- » +0.05V ~ +0.35V      Increases memory voltage by 0.05V to 0.35V at 0.05V increment.

Note: Increasing memory voltage may result in damage to the memory.

### ☞ **VCC12\_HT Voltage Control**

Allows you to set the voltage of the HyperTransport bus between CPU and chipset.

- » Normal                      Supplies the HyperTransport voltage as required. (Default)
- » +0.05V ~ +0.35V      Increases the HyperTransport voltage by 0.05V to 0.35V at 0.05V increment.

### ☞ **NB\_VCC Voltage Control**

Allows you to set the chipset core voltage.

- » Normal                      Supplies the chipset core voltage as required. (Default)
- » +0.05V ~ +0.35V      Increases the chipset core voltage by 0.05V to 0.35V at 0.05V increment.

### ☞ **1V1\_DUAL Voltage Control**

Allows you to set the chipset standby voltage.

- » Normal                      Supplies the chipset standby voltage as required. (Default)
- » +0.05V ~ +0.15V      Increases the chipset standby voltage by 0.05V to 0.15V at 0.05V increment.

### ☞ **CPU NB VID Control** (Note)

Allows you to set the CPU northbridge voltage. **Normal** sets the CPU northbridge voltage as required. The adjustable range is dependent on the CPU being installed. (Default: Normal)

Note: Increasing CPU northbridge voltage may result in damage to your CPU or reduce the useful life of the CPU.

### ☞ **CPU Voltage Control**

Allows you to set the CPU voltage. **Normal** sets the CPU voltage as required. The adjustable range is dependent on the CPU being installed. (Default: Normal)

Note: Increasing CPU voltage may result in damage to your CPU or reduce the useful life of the CPU.

### ☞ **Normal CPU Vcore**

Displays the normal operating voltage of your CPU.

(Note) This item appears only if you install a CPU that supports this feature.

## 2-4 Standard CMOS Features

CMOS Setup Utility-Copyright (C) 1984-2008 Award Software Standard CMOS Features		
Date (mm:dd:yy)	Fri, May 2 2008	Item Help
Time (hh:mm:ss)	22:31:24	Menu Level▶
▶ IDE Channel 0 Master	[None]	
▶ IDE Channel 0 Slave	[None]	
▶ IDE Channel 2 Master	[None]	
▶ IDE Channel 2 Slave	[None]	
▶ IDE Channel 3 Master	[None]	
▶ IDE Channel 3 Slave	[None]	
Drive A	[1.44M, 3.5"]	
Floppy 3 Mode Support	[Disabled]	
Halt On	[All, But Keyboard]	
Base Memory	640K	
Extended Memory	510M	
↑↓→←: Move    Enter: Select    +/-/PU/PD: Value    F10: Save    ESC: Exit    F1: General Help F5: Previous Values    F6: Fail-Safe Defaults    F7: Optimized Defaults		

### ☞ Date

Sets the system date. The date format is week (read-only), month, date and year. Select the desired field and use the up arrow or down arrow key to set the date.

### ☞ Time

Sets the system time. For example, 1 p.m. is 13:0:0. Select the desired field and use the up arrow or down arrow key to set the time.

### ☞ IDE Channel 0 Master/Slave

#### ▶▶ IDE HDD Auto-Detection

Press <Enter> to autodetect the parameters of the IDE/SATA device on this channel.

#### ▶▶ IDE Channel 0 Master/Slave

Configure your IDE/SATA devices by using one of the three methods below:

- Auto                Lets BIOS automatically detect IDE/SATA devices during the POST. (Default)
- None               If no IDE/SATA devices are used, set this item to **None** so the system will skip the detection of the device during the POST for faster system startup.
- Manual            Allows you to manually enter the specifications of the hard drive when the hard drive access mode is set to **CHS**.

▶▶ Access Mode       Sets the hard drive access mode. Options are: Auto (default), CHS, LBA, Large.

### ☞ IDE Channel 2, 3 Master/Slave

#### ▶▶ IDE Auto-Detection

Press <Enter> to autodetect the parameters of the IDE/SATA device on this channel.

#### ▶▶ Extended IDE Drive

Configure your IDE/SATA devices by using one of the two methods below:

- Auto                Lets BIOS automatically detect IDE/SATA devices during the POST. (Default)
- None               If no IDE/SATA devices are used, set this item to **None** so the system will skip the detection of the device during the POST for faster system startup.

▶▶ Access Mode       Sets the hard drive access mode. Options are: Auto (default), Large.

The following fields display your hard drive specifications. If you wish to enter the parameters manually, refer to the information on the hard drive.

- » Capacity                Approximate capacity of the currently installed hard drive.
- » Cylinder               Number of cylinders.
- » Head                    Number of heads.
- » Precomp                Write precompensation cylinder.
- » Landing Zone           Landing zone.
- » Sector                  Number of sectors.

#### **Drive A**

Allows you to select the type of floppy disk drive installed in your system. If you do not install a floppy disk drive, set this item to **None**. Options are: None, 360K/5.25", 1.2M/5.25", 720K/3.5", 1.44M/3.5", 2.88M/3.5".

#### **Floppy 3 Mode Support**

Allows you to specify whether the installed floppy disk drive is 3-mode floppy disk drive, a Japanese standard floppy disk drive. Options are: Disabled (default), Drive A.

#### **Halt On**

Allows you to determine whether the system will stop for an error during the POST.

- » No Errors                The system boot will not stop for any error.
- » All Errors                Whenever the BIOS detects a non-fatal error the system boot will stop.
- » All, But Keyboard       The system boot will not stop for a keyboard error but stop for all other errors. (Default)
- » All, But Diskette        The system boot will not stop for a floppy disk drive error but stop for all other errors.
- » All, But Disk/Key        The system boot will not stop for a keyboard or a floppy disk drive error but it will stop for all other errors.

#### **Memory**

These fields are read-only and are determined by the BIOS POST.

- » Base Memory            Also called conventional memory. Typically, 640 KB will be reserved for the MS-DOS operating system.
- » Extended Memory        The amount of extended memory.

## 2-5 Advanced BIOS Features

CMOS Setup Utility-Copyright (C) 1984-2008 Award Software Advanced BIOS Features		
Virtualization	[Disabled]	Item Help
Patch AMD TLB Erratum <sup>(Note 1)</sup>	[Enabled]	Menu Level▶
AMD K8 Cool&Quiet control	[Auto]	
▶ Hard Disk Boot Priority	[Press Enter]	
First Boot Device	[Floppy]	
Second Boot Device	[Hard Disk]	
Third Boot Device	[CDROM]	
Password Check	[Setup]	
HDD S.M.A.R.T. Capability	[Disabled]	
Away Mode	[Disabled]	
Full Screen LOGO Show	[Enabled]	
x Hybrid SLI <sup>(Note 2)</sup>	Disabled	
x Display Detection <sup>(Note 2)</sup>	Enable	
Init Display First	[Onboard VGA]	
iGPU Frame Buffer Control	[Auto]	
x Frame Buffer Size	128M	
Onboard GPU	[Enable If No Ext PEG]	
↑↓→←: Move    Enter: Select    +/-/PU/PD: Value    F10: Save    ESC: Exit    F1: General Help F5: Previous Values    F6: Fail-Safe Defaults    F7: Optimized Defaults		

### Virtualization

Virtualization allows a platform to run multiple operating systems and applications in independent partitions. With virtualization, one computer system can function as multiple virtual systems. (Default: Disabled)

### Patch AMD TLB Erratum <sup>(Note 1)</sup>

Enables or disables the Patch AMD TLB Erratum function. (Default: Enabled)

### AMD K8 Cool&Quiet control

- ▶ Auto      Lets the AMD Cool'n'Quiet driver dynamically adjust the CPU clock and VIA to reduce heat output from your computer and its power consumption. (Default)
- ▶ Disabled      Disables this function.

### Hard Disk Boot Priority

Specifies the sequence of loading the operating system from the installed hard drives. Use the up or down arrow key to select a hard drive, then press the plus key <+> (or <PageUp>) or the minus key <-> (or <PageDown>) to move it up or down on the list. Press <Esc> to exit this menu when finished.

### First/Second/Third Boot Device

Specifies the boot order from the available devices. Use the up or down arrow key to select a device and press <Enter> to accept. Options are: Floppy, LS120, Hard Disk, CDROM, ZIP, USB-FDD, USB-ZIP, USB-CDROM, USB-HDD, Legacy LAN, Disabled.

(Note 1) This item appears only if you install a CPU that supports this feature.

(Note 2) This item appears only if you install a graphics card that supports this feature.

### 🔑 Password Check

Specifies whether a password is required every time the system boots, or only when you enter BIOS Setup. After configuring this item, set the password(s) under the **Set Supervisor/User Password** item in the BIOS Main Menu.

- ▶▶ Setup A password is only required for entering the BIOS Setup program. (Default)
- ▶▶ System A password is required for booting the system and for entering the BIOS Setup program.

### 🔑 HDD S.M.A.R.T. Capability

Enables or disables the S.M.A.R.T. (Self Monitoring and Reporting Technology) capability of your hard drive. This feature allows your system to report read/write errors of the hard drive and to issue warnings when a third party hardware monitor utility is installed. (Default: Disabled)

### 🔑 Away Mode

Enables or disables Away Mode in Windows XP Media Center operating system. Away Mode allows the system to silently perform unattended tasks while in a low-power mode that appears off. (Default: Disabled)

### 🔑 Full Screen LOGO Show

Allows you to determine whether to display the GIGABYTE Logo at system startup. **Disabled** displays normal POST message. (Default: Enabled)

### 🔑 Hybrid SLI <sup>(Note 2)</sup>

Enables or disables the Hybrid SLI function. (Default: Disabled)

### 🔑 Display Detection <sup>(Note 2)</sup>

**Enabled** allows the BIOS to automatically detect whether the current display is from the onboard VGA or a PCI Express graphics card and to adjust the display setting if the monitor connection is different from the **Init Display First** setting. (Default: Enable)

### 🔑 Init Display First

Specifies the first initiation of the monitor display from the installed PCI graphics card, PCI Express graphics card, or the onboard VGA.

- ▶▶ PCI Slot Sets the PCI graphics card as the first display.
- ▶▶ Onboard VGA Sets the onboard VGA as the first display. (Default)
- ▶▶ PEG Sets the PCI Express graphics card on the PCIEX16\_1 slot as the first display.
- ▶▶ PEG (Slot2) Sets the PCI Express graphics card on the PCIEX8\_1 slot as the first display.

### 🔑 iGPU Frame Buffer Control

Determines whether to manually set the Frame Buffer Size. **Auto** lets BIOS automatically set the Frame Buffer Size as required. **Manual** allows the Frame Buffer Size item below to be configurable. (Default: Auto)

### 🔑 Frame Buffer Size

Frame buffer size is the total amount of system memory allocated solely for the onboard graphics controller. MS-DOS, for example, will use only this memory for display. This item is configurable only if the **iGPU Frame Buffer Control** option is set to **Manual**. Options are: 128M (default), 256M, 512M, Disabled.

(Note 2) This item appears only if you install a graphics card that supports this feature.

## **Onboard GPU**

Enables or disables the onboard VGA function.

### ▶▶ Enable If No Ext PEG

Activates the onboard VGA only if no PCI Express VGA card is installed. (Default)

### ▶▶ Always Enable

Always activates the onboard VGA, whether or not a PCI Express card is installed. If you wish to set up a dual view configuration, set this item to **Always Enable**.

## 2-6 Integrated Peripherals

### ☞ On-Chip IDE Channel

Enables or disables the integrated IDE controller. (Default: Enabled)

### ☞ NV SATA Controller

Enables or disables the integrated SATA controller. (Default: Enabled)

### ☞ OnChip SATA Mode

Configures the operating mode of the integrated SATA controller.

- ▶▶ IDE    Configures the SATA controller to IDE mode. (Default) (Only for SATA2\_0~3 connectors)
- ▶▶ RAID    Enables RAID for the SATA controller.
- ▶▶ AHCI    Configures the SATA controller to AHCI mode. Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced Serial ATA features such as Native Command Queuing and hot plug.

### ☞ Onboard Audio Function

Enables or disables the onboard audio function. (Default: Auto)

If you wish to install a 3rd party add-in audio card instead of using the onboard audio, set this item to **Disabled**.

### ☞ HDMI Audio

Enables or disables the chipse integrated HDMI audio function. (Default: Auto)

### ☞ On-Chip MAC Lan

Enables or disables the onboard LAN function. (Default: Auto)

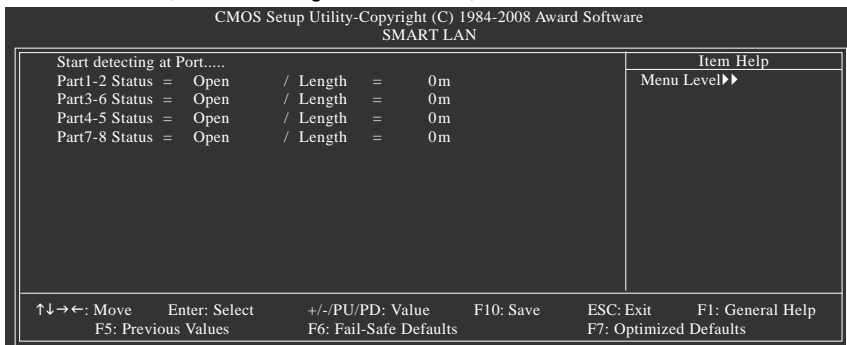

If you wish to install a 3rd party add-in network card instead of using the onboard LAN, set this item to **Disabled**.

### ☞ Onboard 1394

Enables or disables the onboard 1394 function. (Default: Enabled)

## SMART LAN (LAN Cable Diagnostic Function)

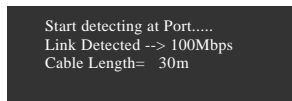

This motherboard incorporates cable diagnostic feature designed to detect the status of the attached LAN cable. This feature will detect cabling issue and report the approximate distance to the fault or short. Refer to the following information for diagnosing your LAN cable:

### When No LAN Cable Is Attached...

If no LAN cable is attached to the motherboard, the **Status** fields of all four pairs of wires will show **Open** and the **Length** fields show **0m**, as shown in the figure above.

### When LAN Cable Is Functioning Normally...

If no cable problem is detected on the LAN cable connected to a Gigabit hub or a 10/100 Mbps hub, the following message will appear:

- ▶▶ Link Detected      Displays transmission speed
- ▶▶ Cable Length      Displays the approximate length of the attached LAN cable.

Note: The Gigabit hub will only operate at a speed of 10/100 Mbps in MS-DOS mode; it will operate at a normal speed of 10/100/1000 Mbps in Windows mode or when the LAN Boot ROM is activated.

### When a Cable Problem Occurs...

If a cable problem occurs on a specified pair of wires, the **Status** field will show **Short** and then length shown will be the approximate distance to the fault or short.

Example: Part1-2 Status = Short / Length = 2m

Explanation: A fault or short might occur at about 2m on Part 1-2.

Note: Part 4-5 and Part 7-8 are not used in a 10/100 Mbps environment, so their **Status** fields will show **Open**, and the length shown is the approximate length of the attached LAN cable.

### ☞ **Onboard LAN Boot ROM**

Allows you to decide whether to activate the boot ROM integrated with the onboard LAN chip.  
(Default: Disabled)

### ☞ **Onboard Serial Port 1**

Enables or disables the first serial port and specifies its base I/O address and corresponding interrupt. Options are: Auto, 3F8/IRQ4 (default), 2F8/IRQ3, 3E8/IRQ4, 2E8/IRQ3, Disabled.

### ☞ **Onboard Parallel Port**

Enables or disables the onboard parallel port (LPT) and specifies its base I/O address and corresponding interrupt. Options are: 378/IRQ7 (default), 278/IRQ5, 3BC/IRQ7, Disabled.

### ☞ **Parallel Port Mode**

Selects an operating mode for the onboard parallel (LPT) port. Options are: SPP (Standard Parallel Port)(default), EPP (Enhanced Parallel Port), ECP (Extended Capabilities Port), ECP+EPP.

### ☞ **ECP Mode Use DMA**

Selects DMA channel for the LPT port in ECP mode. This item is configurable only if **Parallel Port Mode** is set to **ECP** or **ECP+EPP** mode. Options are: 3 (default), 1.

### ☞ **On-Chip USB**

Configures the integrated USB controller.

- V1.1+V2.0      Enables the integrated USB 1.1 and USB 2.0 controllers. (Default)
- V1.1            Enables only the integrated USB 1.1 controller.
- Disabled        Disables the integrated USB 1.1 and USB 2.0 controllers.

### ☞ **USB Memory Type**

Specifies the type of memory allocated for USB devices. Options are: SHADOW (default), Base Memory (640K).

### ☞ **USB Keyboard Support**

Allows USB keyboard to be used in MS-DOS. (Default: Disabled)

### ☞ **USB Mouse Support**

Allows USB mouse to be used in MS-DOS. (Default: Disabled)

### ☞ **Legacy USB storage detect**

Determines whether to detect USB storage devices, including USB flash drives and USB hard drives during the POST. (Default: Enabled)

# 2-7 Power Management Setup

CMOS Setup Utility-Copyright (C) 1984-2008 Award Software		
Power Management Setup		
ACPI Suspend Type	[S1(POS)]	Item Help
Soft-Off by Power button	[Instant-Off]	Menu Level▶
PME Event Wake Up	[Enabled]	
Modem Ring On	[Enabled]	
USB Resume from Suspend	[Enabled]

x Day of Month Alarm	Everyday	
x Time (hh:mm:ss) Alarm	0 : 0 : 0	
HPET Support <small>(Note)</small>	[Enabled]	
HPET Mode <small>(Note)</small>	[32-bit mode]	
Power On By Mouse	[Disabled]	
Power On By Keyboard	[Disabled]	
x KB Power ON Password	Enter	
AC Back Function	[Soft-Off]	
↑↓→←: Move    Enter: Select    +/-/PU/PD: Value    F10: Save    ESC: Exit    F1: General Help F5: Previous Values    F6: Fail-Safe Defaults    F7: Optimized Defaults		

## ACPI Suspend Type

Specifies the ACPI sleep state when the system enters suspend.

- ▶ S1(POS)      Enables the system to enter the ACPI S1 (Power on Suspend) sleep state (default). In S1 sleep state, the system appears suspended and stays in a low power mode. The system can be resumed at any time.
- ▶ S3(STR)      Enables the system to enter the ACPI S3 (Suspend to RAM) sleep state. In S3 sleep state, the system appears to be off and consumes less power than in the S1 state. When signaled by a wake-up device or event, the system resumes to its working state exactly where it was left off.

## Soft-Off by Power button

Configures the way to turn off the computer in MS-DOS mode using the power button.

- ▶ Instant-Off      Press the power button and then the system will be turned off instantly. (Default)
- ▶ Delay 4 Sec.      Press and hold the power button for 4 seconds to turn off the system. If the power button is pressed for less than 4 seconds, the system will enter suspend mode.

## PME Event Wake Up

Allows the system to be awakened from an ACPI sleep state by a wake-up signal from a PCI or PCIe device. Note: To use this function, you need an ATX power supply providing at least 1A on the +5VSB lead. (Default: Enabled)

## Modem Ring On

Allows the system to be awakened from an ACPI sleep state by a wake-up signal from a modem that supports wake-up function. (Default: Enabled)

(Note) Supported on Windows® Vista® operating system only.

### ☞ **USB Resume from Suspend**

Allows the system to be awakened from ACPI S3 sleep state by a wake-up signal from the installed USB device. (Default: Enabled )

### ☞ **Power-On by Alarm**

Determines whether to power on the system at a desired time. (Default: Disabled)

If enabled, set the date and time as following:

▶▶ Day of Month Alarm : Turn on the system at a specific time on each day or on a specific day in a month.

▶▶ Time (hh: mm: ss) Alarm : Set the time at which the system will be powered on automatically.

Note: When using this function, avoid inadequate shutdown from the operating system or removal of the AC power, or the settings may not be effective.

### ☞ **HPET Support** <sup>(Note)</sup>

Enables or disables High Precision Event Timer (HPET) for Windows® Vista® operating system. (Default: Enabled)

### ☞ **HPET Mode** <sup>(Note)</sup>

Allows you to select the HPET mode for your Windows® Vista® operating system. Select **32-bit** mode when you install 32-bit Windows® Vista® ; select **64-bit** mode when you install 64-bit Windows® Vista®. (Default: 32-bit mode)

### ☞ **Power On By Mouse**

Allows the system to be turned on by a PS/2 mouse wake-up event.

Note: To use this function, you need an ATX power supply providing at least 1A on the +5VSB lead.

▶▶ Disabled                      Disables this function. (Default)

▶▶ Double Click                Double click on left button on the PS/2 mouse to turn on the system.

### ☞ **Power On By Keyboard**

Allows the system to be turned on by a PS/2 keyboard wake-up event.

Note: you need an ATX power supply providing at least 1A on the +5VSB lead.

▶▶ Disabled                      Disables this function. (Default)

▶▶ Password                    Set a password with 1~5 characters to turn on the system.

▶▶ Keyboard 98                Press POWER button on the Windows 98 keyboard to turn on the system.

▶▶ Any KEY                    Press any key on the keyboard to turn on the system.

### ☞ **KB Power ON Password**

Set the password when **Power On by Keyboard** is set to **Password**. Press <Enter> on this item and set a password with up to 5 characters and then press <Enter> to accept. To turn on the system, enter the password and press <Enter>.

Note: To cancel the password, press <Enter> on this item. When prompted for the password, press <Enter> again without entering the password to clear the password settings.

### ☞ **AC Back Function**

Determines the state of the system after the return of power from an AC power loss.

▶▶ Soft-Off                      The system stays off upon the return of the AC power. (Default)

▶▶ Full-On                        The system is turned on upon the return of the AC power.

(Note) Supported on Windows® Vista® operating system only.

### Reset Case Open Status

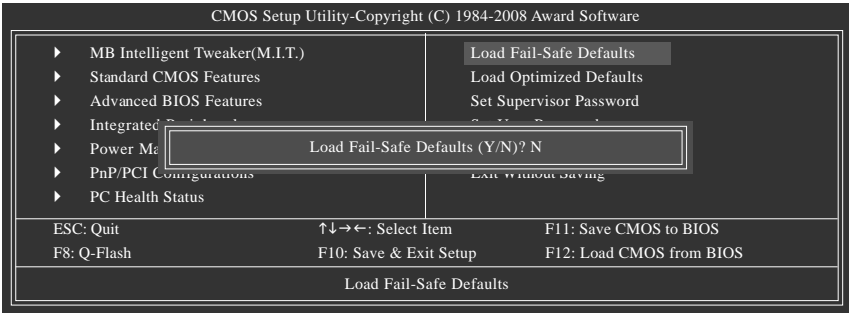

Keeps or clears the record of previous chassis intrusion status. **Enabled** clears the record of previous chassis intrusion status and the **Case Opened** field will show "No" at next boot. (Default: Disabled)

### Case Opened

Displays the detection status of the chassis intrusion detection device attached to the motherboard CI header. If the system chassis cover is removed, this field will show "Yes", otherwise it will show "No". To clear the chassis intrusion status record, set **Reset Case Open Status** to **Enabled**, save the settings to CMOS, and then restart your system.

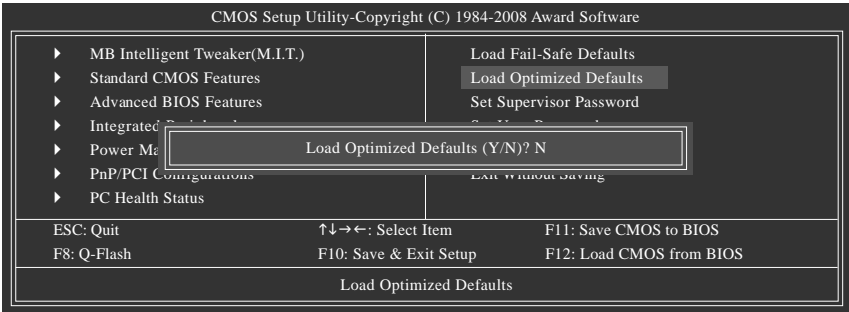

- ☞ **Current Voltage(V) Vcore/DDR2 1.8V/+3.3V/+12V**  
Displays the current system voltages.
- ☞ **Current System/CPU Temperature**  
Displays current system/CPU temperature.
- ☞ **Current CPU/SYSTEM/POWER FAN Speed (RPM)**  
Displays current CPU/system/power fan speed.
- ☞ **System/CPU Warning Temperature**  
Sets the warning threshold for system/CPU temperature. When system/CPU temperature exceeds the threshold, BIOS will emit warning sound. Options are: Disabled (default), 60°C/140°F, 70°C/158°F, 80°C/176°F, 90°C/194°F.
- ☞ **CPU/SYSTEM/POWER FAN Fail Warning**  
Allows the system to emit warning sound if the CPU/system/power fan is not connected or fails. Check the fan condition or fan connection when this occurs. (Default: Disabled)
- ☞ **CPU Smart FAN Control**  
Enables or disables the CPU fan speed control function. **Enabled** allows the CPU fan to run at different speed according to the CPU temperature. You can adjust the fan speed with EasyTune based on system requirements. If disabled, CPU fan runs at full speed. (Default: Enabled)
- ☞ **CPU Smart FAN Mode**  
Specifies how to control CPU fan speed. This item is configurable only if **CPU Smart FAN Control** is set to **Enabled**.
  - » Auto Lets BIOS autodetect the type of CPU fan installed and sets the optimal CPU fan control mode. (Default)
  - » Voltage Sets Voltage mode for a 3-pin CPU fan.
  - » PWM Sets PWM mode for a 4-pin CPU fan.
- ☞ **System Smart FAN Control**  
Enables or disables the system fan speed control function. **Enabled** allows the system fan to run at different speed according to the system temperature. You can adjust the fan speed with EasyTune based on system requirements. If disabled, system fan runs at full speed. (Default: Enabled)

## 2-10 Load Fail-Safe Defaults

Press <Enter> on this item and then press the <Y> key to load the safest BIOS default settings. In case system instability occurs, you may try to load Fail-Safe defaults, which are the safest and most stable BIOS settings for the motherboard.

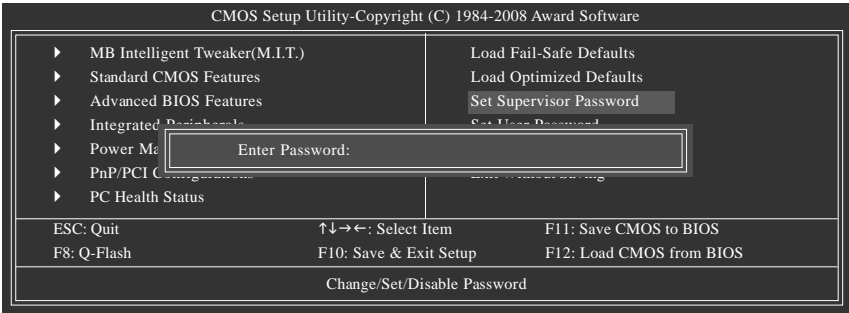

## 2-11 Load Optimized Defaults

Press <Enter> on this item and then press the <Y> key to load the optimal BIOS default settings. The BIOS defaults settings helps the system to operate in optimum state. Always load the Optimized defaults after updating the BIOS or after clearing the CMOS values.

## 2-12 Set Supervisor/User Password

Press <Enter> on this item and type the password with up to 8 characters and then press <Enter>. You will be requested to confirm the password. Type the password again and press <Enter>.

The BIOS Setup program allows you to specify two separate passwords:

### 🔑 Supervisor Password

When a system password is set and the **Password Check** item in **Advanced BIOS Features** is set to **Setup**, you must enter the supervisor password for entering BIOS Setup and making BIOS changes.

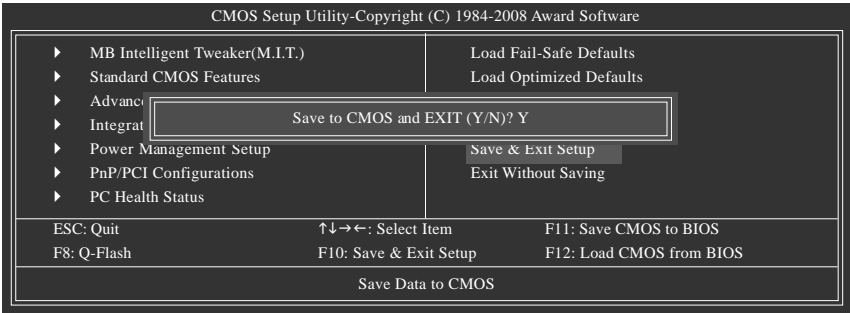

When the **Password Check** item is set to **System**, you must enter the supervisor password (or user password) at system startup and when entering BIOS Setup.

### 🔑 User Password

When the **Password Check** item is set to **System**, you must enter the supervisor password (or user password) at system startup to continue system boot. In BIOS Setup, you must enter the supervisor password if you wish to make changes to BIOS settings. The user password only allows you to view the BIOS settings but not to make changes.

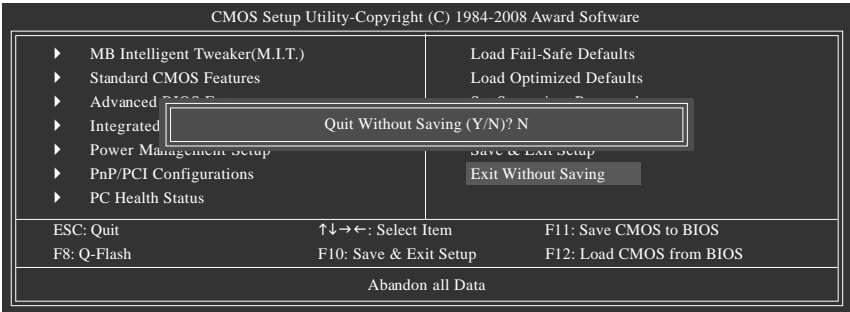

To clear the password, press <Enter> on the password item and when requested for the password, press <Enter> again. The message "PASSWORD DISABLED" will appear, indicating the password has been cancelled.

## 2-13 Save & Exit Setup

Press <Enter> on this item and press the <Y> key. This saves the changes to the CMOS and exits the BIOS Setup program. Press <N> or <Esc> to return to the BIOS Setup Main Menu.

## 2-14 Exit Without Saving

Press <Enter> on this item and press the <Y> key. This exits the BIOS Setup without saving the changes made in BIOS Setup to the CMOS. Press <N> or <Esc> to return to the BIOS Setup Main Menu.

## Chapter 3 Drivers Installation

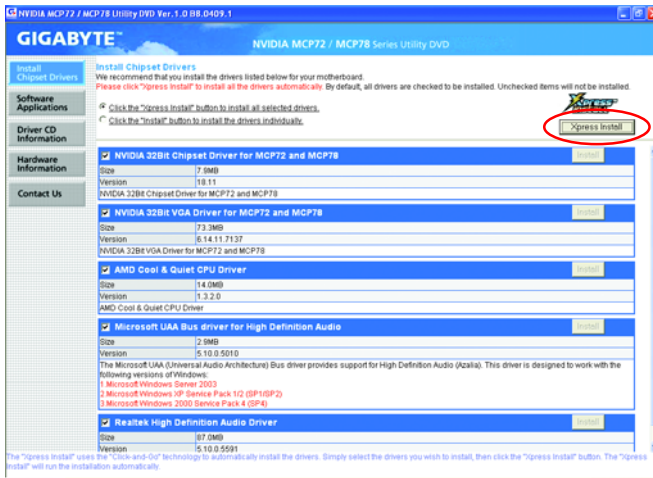

- Before installing the drivers, first install the operating system. (The following instructions use Windows XP as the example operating system.)
- After installing the operating system, insert the motherboard driver disk into your optional drive. The driver Autorun screen is automatically displayed which looks like that shown in the screen shot below. (If the driver Autorun screen does not appear automatically, go to My Computer, double-click the optical drive and execute the **Run.exe** program.)

### 3-1 Installing Chipset Drivers

"Xpress Install " is now analyzing your computer...99%

After inserting the driver disk, "Xpress Install" will automatically scan the system and then list all the drivers that are recommended to install. Please select the item that you wish to install and press the **Install** button following the item. Or you can press **Xpress Install** to install all the driver items.

- Please ignore the popup dialog box(es) (e.g. the **Found New Hardware Wizard**) displayed when "Xpress Install" is installing the drivers. Failure to do so may affect the driver installation.
- Some device drivers will restart your system automatically during the driver installation. After the system restart, "Xpress Install" will continue to install other drivers.
- After the drivers are installed, follow the onscreen instructions to restart your system. You can install other applications included in the motherboard driver disk.
- For USB 2.0 driver support under the Windows XP operating system, please install the Windows XP Service Pack 1 or later. After installing the SP1 (or later), if a question mark still exists in **Universal Serial Bus Controller** in **Device Manager**, please remove the question mark (by right-clicking your mouse and select **Uninstall**) and restart the system. (The system will then autodetect and install the USB 2.0 driver.)

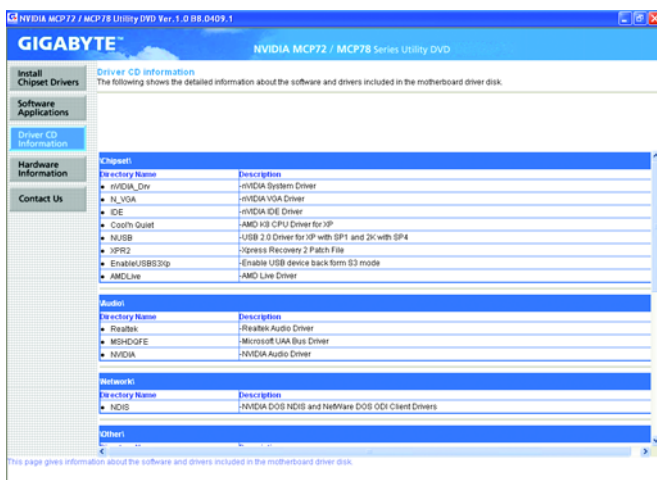

## 3-2 Software Applications

This page displays all the tools and applications that GIGABYTE develops and some free software. You may press the **Install** button following an item to install it.

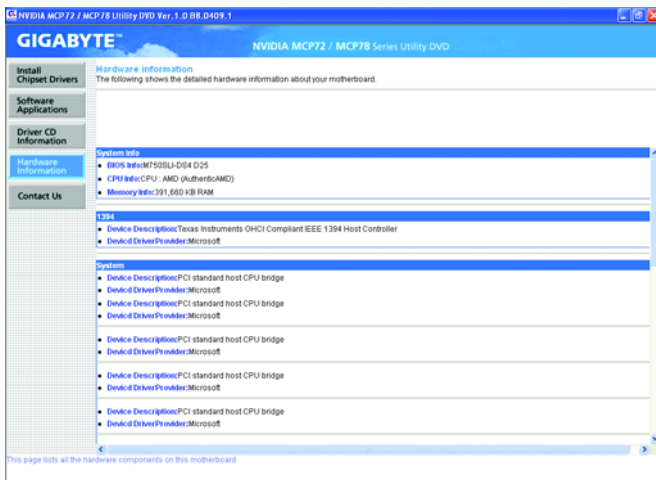

## 3-3 Driver CD Information

This page provides information about the drivers, applications and tools in this driver disk.

### 3-4 Hardware Information

This page provides information about the hardware devices on this motherboard.

### 3-5 Contact Us

Check the contacts information of the GIGABYTE headquarter in Taiwan and the overseas branch offices on the last page of this manual.

[illegible]

## Chapter 4 Unique Features

### 4-1 Xpress Recovery2

Xpress Recovery2 is a utility that allows you to quickly compress and back up your system data and perform restoration of it. Supporting NTFS, FAT32, and FAT16 file systems, Xpress Recovery2 can back up data on PATA and SATA hard drives and restore it.

#### Before You Begin:

- Xpress Recovery2 will check the first physical hard drive\* for the operating system. Xpress Recovery2 can only back up/restore the first physical hard drive that has the operating system installed.
- As Xpress Recovery2 will save the backup file at the end of the hard drive, make sure to leave enough unallocated space in advanced (10 GB or more is recommended; actual size requirements vary, depending on the amount of data).
- It is recommended to back up your system soon after the operating system and drivers are installed.
- The amount of data and hard drive access speed may affect the speed at which the data is backed up/restored.
- It takes longer to back up a hard drive than to restore it.

#### System Requirements:

- AMD platform
- At least 64 MB of system memory
- VESA compatible graphics card
- Windows® XP with SP1 or later

- Xpress Recovery and Xpress Recovery2 are different utilities. For example, a backup file created with Xpress Recovery cannot be restored using Xpress Recovery2.
- USB hard drives are not supported.
- Hard drives in RAID/AHCI mode are not supported.

\*\*\* Xpress Recovery2 checks the first physical hard drive in the following sequence: The first PATA IDE connector, the second PATA IDE connector, the first SATA connector, the second SATA connector and so forth. For example, when hard drives are attached to the first IDE and the first SATA connectors, the hard drive on the first IDE connector is the first physical drive. When hard drives are attached to the first and second SATA connectors, the hard drive on the first SATA connector is the first physical drive.

# Installation and Configuration

(The following procedure uses Windows XP as the example operating system.)

## A. Installing Windows XP and Partitioning the Hard Drive

1. Set CD-ROM drive as the first boot device under "Advanced BIOS Features" in the BIOS Setup program. Save the changes and exit.
2. When partitioning your hard drive (Figure 1), make sure to leave unallocated space for Xpress Recovery2 (10 GB or more is recommended; actual size requirements vary, depending on the amount of data) (Figure 2).

Figure 1

Figure 2

3. Select a file system (for example, NTFS) and begin the installation of the operating system (Figure 3).

Figure 3

- After the operating system is installed, right-click the **My Computer** icon on your desktop and select **Manage** (Figure 4). Go to **Computer Management** to check disk allocation. Xpress Recovery2 will save the backup file to the unallocated space (black stripe along the top)(Figure 5). Please note that if there is no enough unallocated space, Xpress Recovery2 cannot save the backup file.

Figure 4

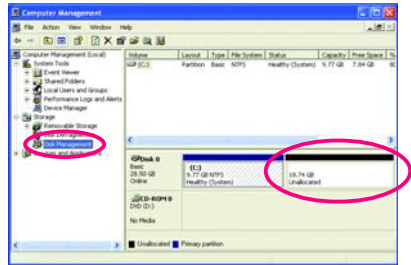

Figure 5

- If your hard drive is not properly partitioned before you install the operating system, you may create new partitions using free space on your hard drive (Figure 6, 7). However, if **Disk Management** shows the hard drive only contains the System partition without any unallocated space, you will not be able to create new partitions or use Xpress Recovery2. If this occurs, reinstall the operating system and re-partition your hard drive.

Figure 6

Figure 7

In the New Partition Wizard, you **MUST** select **Primary partition**. This will reserve unallocated space for Xpress Recovery2 to use.

## B. Accessing Xpress Recovery2

1. Boot from the motherboard driver disk to access Xpress Recovery2 for the first time. When you see the following message: Press any key to startup Xpress Recovery2 (Figure 8), press any key to enter Xpress Recovery2.

Figure 8

2. After you use the backup function in Xpress Recovery2 for the first time, Xpress Recovery2 will stay permanent in your hard drive. If you wish to enter Xpress Recovery2 later, simply press <F9> during the POST (Figure 9).

Figure 9

## C. Using the Backup Function in Xpress Recovery2

1. Select **BACKUP** to start backing up your hard drive data (Figure 10).
2. Xpress Recovery2 will then begin to search the first physical hard drive as the target drive and detect whether this hard drive contains the Windows operating system. When the Windows operating system is detected, Xpress Recovery2 will begin the backup process (Figure 11).

Figure 10

Figure 11

3. When finished, go to **Disk Management** to check disk allocation.

Figure 12

Xpress Recovery2 will automatically create a new partition to store the backup image file.

## D. Using the Restore Function in Xpress Recovery2

Select **RESTORE** to restore the backup to your hard drive in case the system breaks down. The **RESTORE** option will not be present if no backup is created before (Figure 13, 14).

Figure 13

Figure 14

## E. Removing the Backup

1. If you wish to remove the backup file, select **REMOVE** (Figure 15).
2. After the backup file is removed, no backup image file will be present in **Disk Management** and hard drive space will be freed up (Figure 16).

Figure 15

Figure 16

## F. Exiting Xpress Recovery2

Select **REBOOT** to exit Xpress Recovery2.

Figure 17

## 4-2 BIOS Update Utilities

GIGABYTE motherboards provide two unique BIOS update tools, Q-Flash™ and @BIOS™. GIGABYTE Q-Flash and @BIOS are easy-to-use and allow you to update the BIOS without the need to enter MS-DOS mode. Additionally, this motherboard features the DualBIOS™ design, which enhances protection for the safety and stability of your computer by adding one more physical BIOS chip.

### What is DualBIOS™?

Motherboards that support DualBIOS have two BIOS onboard, a main BIOS and a backup BIOS. Normally, the system works on the main BIOS. However, if the main BIOS is corrupted or damaged, the backup BIOS will take over on the next system boot and copy the BIOS file to the main BIOS to ensure normal system operation. For the sake of system safety, users cannot update the backup BIOS manually.

### What is Q-Flash™?

With Q-Flash you can update the system BIOS without having to enter operating systems like MS-DOS or Window first. Embedded in the BIOS, the Q-Flash tool frees you from the hassles of going through complicated BIOS flashing process.

### What is @BIOS™?

@BIOS allows you to update the system BIOS while in the Windows environment. @BIOS will download the latest BIOS file from the nearest @BIOS server site and update the BIOS.

### 4-2-1 Updating the BIOS with the Q-Flash Utility

#### A. Before You Begin:

1. From GIGABYTE's website, download the latest compressed BIOS update file that matches your motherboard model.
2. Extract the file and save the new BIOS file (e.g. 75SLIDS4.F1) to your floppy disk, USB flash drive, or hard drive. Note: The USB flash drive or hard drive must use FAT32/16/12 file system.
3. Restart the system. During the POST, press the <End> key to enter Q-Flash. Note: You can access Q-Flash by either pressing the <End> key during the POST or pressing the <F8> key in BIOS Setup. However, if the BIOS update file is saved to a hard drive in RAID/AHCI mode or a hard drive attached to an independent IDE/SATA controller, use the <End> key during the POST to access Q-Flash.

Because BIOS flashing is potentially risky, please do it with caution. Inadequate BIOS flashing may result in system malfunction.

## B. Updating the BIOS

When updating the BIOS, choose the location where the BIOS file is saved. The follow procedure assumes that you save the BIOS file to a floppy disk.

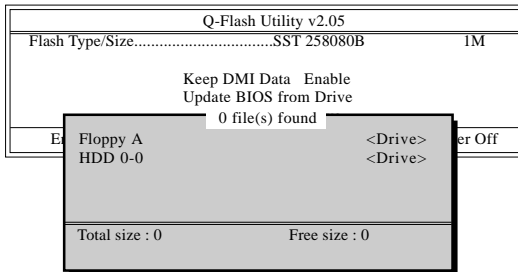

Step 1:

1. Insert the floppy disk containing the BIOS file into the floppy disk drive. In the main menu of Q-Flash, use the up or down arrow key to select **Update BIOS from Drive** and press <Enter>.

- The **Save Main BIOS to Drive** option allows you to save the current BIOS file.
- Q-Flash only supports USB flash drive or hard drives using FAT32/16/12 file system.
- If the BIOS update file is saved to a hard drive in RAID/AHCI mode or a hard drive attached to an independent IDE/SATA controller, use the <End> key during the POST to access Q-Flash.

2. Select **Floppy A** and press <Enter>.

3. Select the BIOS update file and press <Enter>.

Make sure the BIOS update file matches your motherboard model.

Step 2:

The process of the system reading the BIOS file from the floppy disk is displayed on the screen. When the message "Are you sure to update BIOS?" appears, press <Enter> to begin the BIOS update. The monitor will display the update process.

- Do not turn off or restart the system when the system is reading/updating the BIOS.
- Do not remove the floppy disk, USB flash drive, or hard drive when the system is updating the BIOS.

Step 3:

When the update process is complete, press any key to return to the main menu.

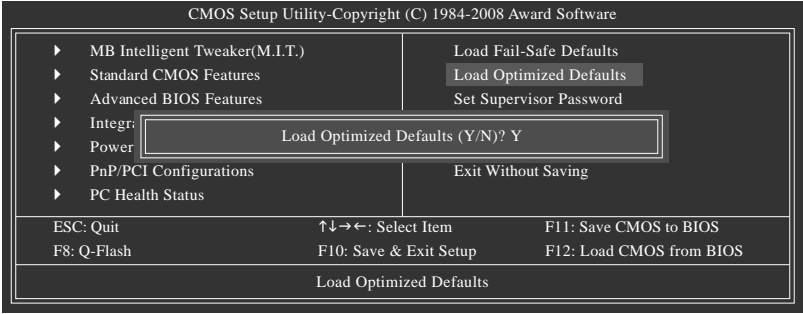

Step 4:

Press <Esc> and then <Enter> to exit Q-Flash and reboot the system. As the system boots, you should see the new BIOS version is present on the POST screen.

Step 5:

During the POST, press <Delete> to enter BIOS Setup. Select **Load Optimized Defaults** and press <Enter> to load BIOS defaults. System will re-detect all peripherals devices after a BIOS update, so we recommend that you reload BIOS defaults.

Press <Y> to load BIOS defaults

Step 6:

Select **Save & Exit Setup** and then press <Y> to save settings to CMOS and exit BIOS Setup. The procedure is complete after the system restarts.

## 4-2-2 Updating the BIOS with the @BIOS Utility

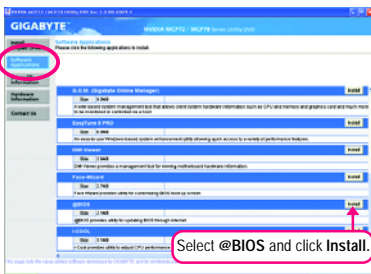

### A. Before You Begin:

1. In Windows, close all applications and TSR (Terminate and Stay Resident) programs. This helps prevent unexpected failures when performing a BIOS update.
2. During the BIOS update process, ensure the Internet connection is stable and do NOT interrupt the Internet connection (for example, avoid a power loss or switching off the Internet). Failure to do so may result in a corrupted BIOS or a system that is unable to start.
3. Do not use the G.O.M. (GIGABYTE Online Management) function when using @BIOS.
4. GIGABYTE product warranty does not cover any BIOS damage or system failure resulting from an inadequate BIOS flashing.

### B. Installing and Using @BIOS:

Use the motherboard driver disk included with the motherboard to install @BIOS.

- Installing the @BIOS utility.

- Accessing the @BIOS utility.

### C. Options and Instructions:

#### 1. Save the Current BIOS File

In the main dialog box of @BIOS, **Save Current BIOS** allows you to save the current BIOS file.

#### 2. Update the BIOS Using the Internet Update Function

Step 2:

Select the @BIOS server site closest to your location and click **OK**.

Step 1:

Select the **Find BIOS From Gigabyte** check box and click **Update New BIOS**.

Step 3:

First make sure the model name on the screen is correct, then click **OK**. Upon completion, restart your system.

- If more than one model is present when doing Step 3 above, reconfirm your motherboard model. Updating the BIOS with an incorrect BIOS file could result in an unbootable system.
- If the BIOS update file for your motherboard is not present on the @BIOS server site, please manually download the BIOS update file from GIGABYTE's website and follow the instructions in "Update the BIOS without Using the Internet Update Function" below.

Step 4:

As the system reboots, press <Delete> to enter the BIOS Setup program. Select **Load Optimized Defaults** and press <Enter> to load BIOS defaults.

### 3. Update the BIOS without Using the Internet Update Function

Step 1:

Click **Update New BIOS**.

Step 2:

In the **Open** dialog box, select **All Files (\*.\*)** in the **Files of type** list. Select the location where you save the BIOS update file (e.g. 75SLIDS4.F1) obtained from the Internet or through other source.

Step 3:

Press **OK** to begin the BIOS update process. Upon completion, restart your system.

Make sure the extracted BIOS file matches your motherboard model. Updating the BIOS with an incorrect BIOS file could result in an unbootable system.

Step 4:

As the system boots, press <Delete> to enter the BIOS Setup program. Select **Load Optimized Defaults** and press <Enter> to load BIOS defaults.

## 4-3 EasyTune 5 Pro

EasyTune™ 5 Pro, an easy-to-use and convenient system overclocking and management tool, lets you do overclock and overvoltage in Windows environment, eliminating the need to enter the BIOS Setup program. EasyTune 5 Pro provides the following functions (Note 1): overclocking/overvoltage, C.I.A./M.I.B. (Note 2), smart fan control, and hardware monitoring and warning. (For instructions on using EasyTune5 Pro, read or download the information on/from the Support\Motherboard\Utility page on our website.)

### The EasyTune 5 Pro Interface

Button Information Table

	Button/Display	Description
1.	OVERCLOCKING	Enters the OVERCLOCKING setting page
2.	C.I.A./M.I.B.	Enters the C.I.A. and M.I.B. setting page
3.	SMART FAN	Enters the SMART FAN setting page
4.	PC HEALTH	Enters the PC HEALTH setting page
5.	GO	Confirmation/execution button
6.	EASY MODE/ADVANCED MODE/GRAPHICS	Toggles among Easy Mode, Advanced Mode, and Graphics Mode
7.	Display Area	Displays the CPU frequency
8.	Function LEDs	Shows the supported function(s)
9.	Live Update	Go to GIGABYTE website to update EasyTune 5 Pro
10.	Help	Opens EasyTune 5 Pro help file
11.	Exit/Minimize	Quits or minimizes the EasyTune 5 Pro interface
12.	Turbo Boost	Performance Enhancement

Incorrectly doing overclock/overvoltage may result in damage to CPU, chipset, or memory and reduce the useful life of these components. Before you do the overclock/overvoltage, make sure that you fully know how to use each function of EasyTune 5 Pro, or system instability or other unexpected results may occur.

(Note 1) Available functions in EasyTune 5 Pro may differ by motherboard model.

(Note 2) C.I.A. and M.I.B. may provide optimizations for CPU and memory, enhancing the performance of these components.

## 4-4 Windows Vista ReadyBoost

Windows ReadyBoost allows you to use flash memory on a Windows Vista certified USB flash drive to boost your computer's performance. You may enable ReadyBoost and allocate part of your USB flash drive's memory to speed up your computer.

Follow the steps below to enable the ReadyBoost function:

Step 1:

Go to **Computer**. Right-click on the USB flash drive icon and choose **Properties**.

Step 2:

In the **ReadyBoost** tab, select **Use this device**. Under **Space to reserve for system speed**, set the amount of memory space to use for ReadyBoost using the slider or spin box. Click **Apply** and then **OK** to turn on ReadyBoost.

- The USB flash drive must have at least 256 MB of space.
- The recommended amount of memory to use for ReadyBoost acceleration is one to three times the amount of RAM installed in your computer.

## Chapter 5 Appendix

### 5-1 Configuring SATA Hard Drive(s)

To configure SATA hard drive(s), follow the steps below:

- A. Install SATA hard drive(s) in your computer.
- B. Configure SATA controller mode in BIOS Setup.
- C. Configure a RAID array in RAID BIOS. <sup>(Note 1)</sup>
- D. Make a floppy disk containing the SATA RAID/AHCI driver. <sup>(Note 2)</sup>
- E. Install the SATA RAID/AHCI driver and operating system. <sup>(Note 2)</sup>

#### Before you begin

Please prepare:

- At least two SATA hard drives (to ensure optimal performance, it is recommended that you use two hard drives with identical model and capacity). If you do not want to create RAID, you may prepare only one hard drive.
- Two empty formatted floppy disks.
- Windows Vista/XP setup disk.
- Motherboard driver disk.

#### 5-1-1 Configuring the Onboard SATA Controller

##### A. Installing SATA hard drive(s) in your computer

Attach one end of the SATA signal cable to the rear of the SATA hard drive and the other end to an available SATA port on the motherboard. Then connect the power connector from your power supply to the hard drive.

(Note 1) Skip this step if you do not want to create RAID array on the SATA controller.

(Note 2) Required when the SATA controller is set to AHCI or RAID mode.

## B. Configuring SATA controller mode in BIOS Setup

Make sure to configure the SATA controller mode correctly in system BIOS Setup .

### Step 1:

Turn on your computer and press <Delete> to enter BIOS Setup during the POST (Power-On Self-Test).

Ensure **NV SATA Controller** is enabled under **Integrated Peripherals**. To create RAID, set **OnChip**

**SATA Mode** to **RAID** (Figure 1).

Figure 1

### Step 2:

Save changes and exit BIOS Setup.

The BIOS Setup menus described in this section may differ from the exact settings for your motherboard. The actual BIOS Setup menu options you will see shall depend on the motherboard you have and the BIOS version.

### C. Configuring RAID set in RAID BIOS

Enter the RAID BIOS setup utility to configure a RAID array. For a non-RAID configuration, please skip this step and proceed to the installation of Windows operating system.

Step 1:

After the POST memory test begins and before the operating system boot begins, look for a message which says "Press F10 to enter RAID setup utility" (Figure 2). Hit the <F10> key to enter the NVIDIA RAID setup utility.

Figure 2

Step 2:

The **Define a New Array** screen is the first option screen when you enter the NVIDIA RAID setup utility. (Figure 3). You can press the <Tab> key to move from field to field until the appropriate field is highlighted.

Step 3:

In the **RAID Mode** field, use the up or down arrow key to select a RAID mode. The supported RAID modes include Mirrored, Striped, Spanned, Striped Mirror, and RAID5. The following procedure demonstrates how a RAID 0 array is created.

Step 4:

If RAID 0 (Striped) is selected, you can manually set the stripe block size. In the **Stripe Block** field, use the up or down arrow key to set the stripe block size. Stripe block size is given in kilobytes. We recommend you leaving it at the default **Optimal**, which is 64 KB. The stripe block size can be set from 4 KB to 128 KB

Figure 3

Step 5:

Next, select the hard drives which you wish to be included in the disk array. The **Free Disks** block displays the information about the SATA hard drives that are available for use as RAID array drives. Press <Tab> to move to the **Free Disks** block. Select the target hard drives using the up or down arrow key and use the right arrow key to add the hard drives to the **Array Disks** block (Figure 4).

Figure 4

Step 6:

After assigning the RAID drives, press <F7>. A message which says "All data on new(or added) disks may be overwritten. Continue?" appears (Figure 5). To overwrite the data in the selected hard drives, press <Y> to confirm or press <N> to cancel. (If the hard drives contain a previously created RAID array, you need to press <Y> to clear the data in the hard drives.) If you confirm Yes to the prompt above, the "Clear MBR?" prompt appears. Press <Y> to clear or <N> to abort. (We recommend that you clear the MBR to reduce drive errors.)

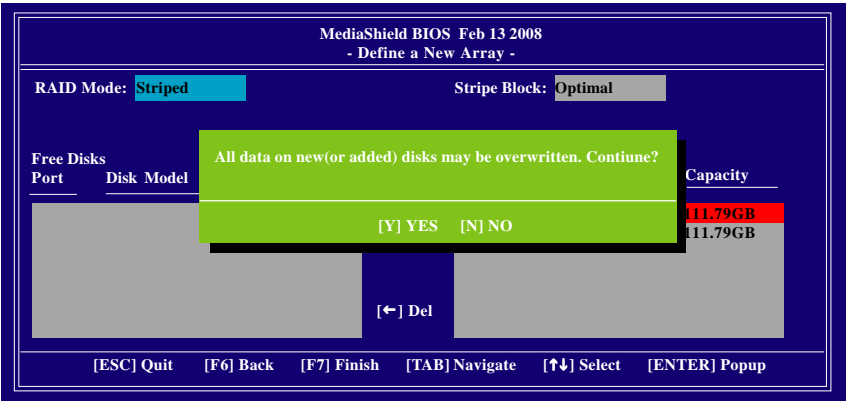

Figure 5

After that, the **Array List** screen appears, displaying the RAID array that you have created (Figure 6). (Note: **BBS** stands for BIOS Boot Specification. This indicates that the boot device is defined in the BIOS.)

Boot	Status	Vendor	Array	Size
BBS	Healthy	NVIDIA	STRIPE	223.57G

[Ctrl-X] Exit   [↑↓] Select   [B] Set Bootable   [N] New Array   [ENTER] Detail

Figure 6

To read more information about the RAID array, press <Enter> to enter the **Array Detail** screen (Figure 7), which shows various information about the array, including the RAID mode, stripe block size, hard drive model name, and hard drive capacity, etc.

Port	Index	Disk Model	Capacity
0.0	0	ST3120026AS	111.79GB
0.2	1	ST3120026AS	111.79GB

[R] Rebuild   [D] Delete   [C] Clear MBR   [V] remove Vol   [ENTER] Return

Figure 7

To clear MBR, press <C> in the **Array Detail** screen. When the "Clear MBR?" message appears, press <Y> to clear or <N> to cancel.

To delete the array, press <D> in the **Array Detail** screen. When the "Delete array?" message appears, press <Y> to confirm or <N> to cancel. Press <Enter> to return to the **Array List** screen.

To exit the NVIDIA RAID setup utility, press <Esc> in the main menu or <Ctrl>+<X> in the **Array List** screen.

Now, you can proceed to the installation of the SATA controller driver and operating system.

### 5-1-2 Making a SATA RAID/AHCI Driver Diskette for Windows XP (Required for AHCI and RAID Mode)

To successfully install operating system onto SATA hard drive(s) that is/are configured to RAID/AHCI mode, you need to install the SATA controller driver during the OS installation. Without the driver, the hard drive may not be recognized during the Windows setup process. First of all, copy the driver for the SATA controller from the motherboard driver disk to a floppy disk. For installing Windows Vista, you may directly load the SATA RAID driver from the motherboard driver disk during the OS installation process. For more details, refer to the next section, "5-1-3." See the instructions below about how to copy the driver in MS-DOS mode<sup>(Note)</sup>. Prepare a startup disk that has CD-ROM support and two blank formatted floppy disks.

Step 1: Insert the prepared startup disk and motherboard driver disk in your system. Boot from the startup disk. Once at the A:\> prompt, change to your optical drive (example: D:\>). At the D:\> prompt, type the following two commands. Press <Enter> after each command (Figure 1):

```
cd bootdrv
menu
```

Step 2: When the controller menu (Figure 2) appears, remove the startup disk and insert a blank formatted disk. Select the controller driver by pressing the corresponding letter from the menu. Each item requires one floppy disk. For example, in the menu in Figure 2, to install Windows XP (32-bit) onto your RAID drives, press <3> to select **3)NVIDIA MCP72 and MCP78 Series RAID Driver Disk1** (you can label it as Disk 1). Your system will automatically zip and transfer the driver file to the floppy disk. When finished, insert the other floppy disk and select **4)NVIDIA MCP72 and MCP78 Series RAID Driver Disk2** (you can label it as Disk 2). Be sure to provide both of the two floppy disks for loading the RAID drivers when installing Windows XP (see the next section). Press <0> to exit this menu when all finished.

### 5-1-3 Installing the SATA RAID/AHCI Driver and Operating System

Now that you have prepared the SATA RAID/AHCI driver diskette and configured the required BIOS settings, you are ready to install Windows Vista/XP onto your hard drive(s).

#### A. Installing Windows XP

Step 1: Restart your system to boot from the Windows XP setup disk and press <F6> as soon as you see the message "Press F6 if you need to install a 3rd party SCSI or RAID driver" (Figure 1). After pressing <F6>, there will be a few moments of some files being loaded before you see the next screen.

Figure 1

Step 2:

When a screen similar to that below appears, insert the first floppy disk (for example, NVIDIA MCP72 and MCP78 Series RAID Driver Disk1) containing the SATA RAID/AHCI driver and press <S> (Figure 2).

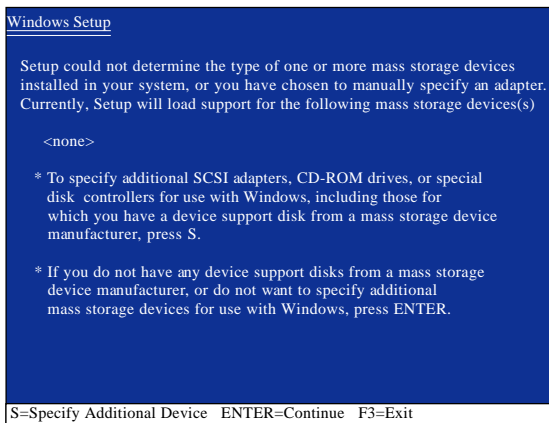

Figure 2

### Step 3:

When installing the RAID driver, for example, if Setup correctly recognizes the driver in the floppy disk, a controller menu <sup>(Note)</sup> similar to that in Figure 3 below will appear. Use the arrow keys to select **NVIDIA RAID Driver** and press <Enter>. Later, when a screen similar to that in Figure 4 appears, you must press <S> to select an additional driver. The screen will return to previous screen as shown in Figure 3. Select **NVIDIA nForce Storage Controller** and press <Enter>.

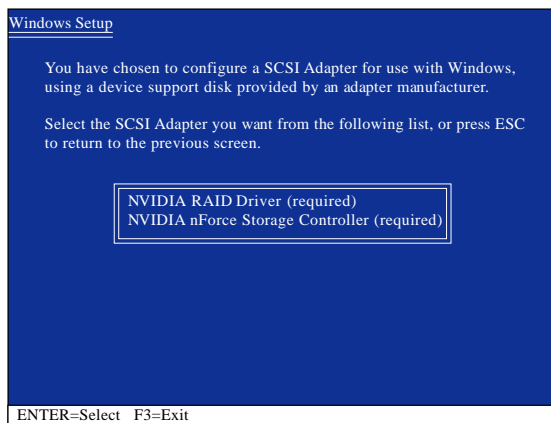

Figure 3

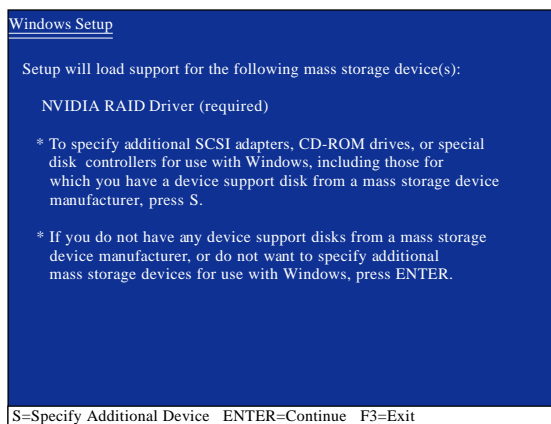

Figure 4

If a message appears saying one or some file(s) cannot be found, please check the floppy disk or copy the correct SATA RAID driver again from the motherboard driver disk.

(Note) The selectable item(s) displayed in Figure 3 may differ according to the RAID or AHCI driver you will install.

When the screen as shown below appears, press <Enter> to continue the driver installation from the floppy disk. The driver installation will be finished in about one minute.

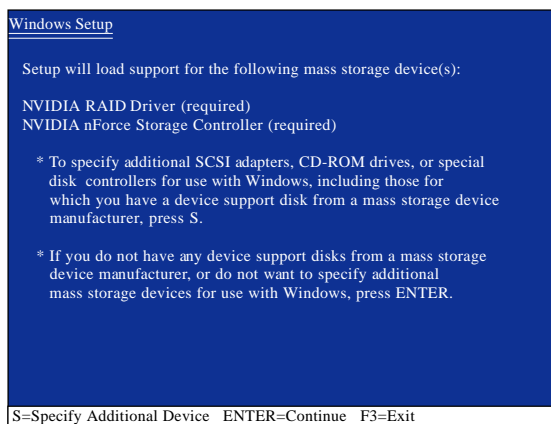

Figure 5

Step 4:

After the SATA controller driver installation is completed, you can proceed with the Windows XP installation.

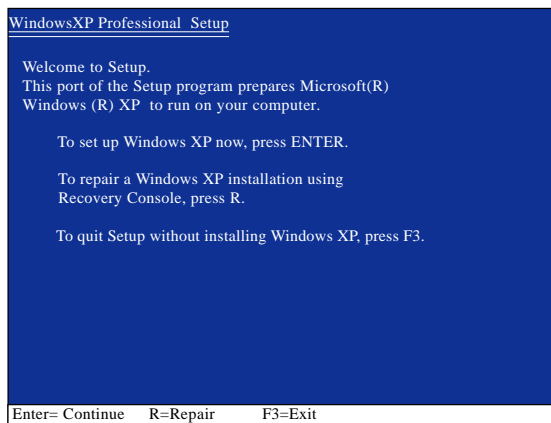

Figure 6

Step 5:

When a screen similar to that below appears, insert the second floppy disk (for example, NVIDIA MCP72 and MCP78 Series RAID Driver Disk2) containing the SATA RAID/AHCI driver (Figure 7) and press <Enter>. Follow the on-screen instructions to complete the installation (Disk 1 and Disk 2 will still be needed in the following process).

Figure 7

## B. Installing Windows Vista

(The procedure below assumes that only one RAID array exists in your system.)

### Step 1:

Restart your system to boot from the Windows Vista setup disk and perform standard OS installation steps. When a screen similar to that below appears (RAID hard drive will not be detected at this stage), select **Load Driver**. (Figure 8).

Figure 8

### Step 2:

Specify the location where the driver is saved. For users using a SATA optical drive, be sure to copy the driver files from the motherboard driver disk to a USB flash drive before installing Windows Vista (go to the **BootDrv** folder and save the whole **Vista32 RAID** or **Vista64RAID** folder to the USB flash drive). Then use Method B to load the driver.

#### Method A:

Insert the motherboard driver disk into your system and browse to the following directory:

**\\BootDrv\\Vista32RAID**

For Windows Vista 64-bit, browse to the **Vista64RAID** folder (Figure 9).

#### Method B:

Insert the USB flash drive containing the driver files and browse to the **Vista32RAID** (for Windows Vista 32-bit) or **Vista64RAID** (for Windows Vista 64-bit) folder.

Figure 9

Step 3:  
When a screen as shown in Figure 10 appears, select **NVIDIA nForce RAID Controller** and press **Next**.

Figure 10

Step 4:  
After the driver is loaded, the screen will show the RAID hard drive. Select the RAID hard drive onto which you want to install the operating system and then press **Next** to continue the OS installation (Figure 11).

Figure 11

## 5-2 Configuring Audio Input and Output

### 5-2-1 Configuring 2/4/5.1/7.1-Channel Audio

The motherboard provides six audio jacks on the back panel which support 2/4/5.1/7.1-channel audio. The picture to the right shows the default audio jack assignments.

The integrated HD (High Definition) audio provides jack retasking capability that allows the user to change the function for each jack through the audio driver.

For example, in a 4-channel audio configuration, if a Rear speaker is plugged into the default Center/Subwoofer speaker out jack, you can retask the Center/Subwoofer speaker out jack to be Rear speaker out.

- To install a microphone, connect your microphone to the Mic in jack and manually configure the jack for microphone functionality.
- If your front panel audio supports Intel HD Audio standard, you can have both the front and back panel audio connectors active simultaneously.

#### High Definition Audio (HD Audio)

HD Audio includes multiple high quality digital-to-analog converters (DACs) that support 44.1KHz/ 48KHz/ 96KHz/192KHz sampling rate. HD Audio features multistreaming capabilities that allow multiple audio streams (in and out) to be simultaneously processed. For example, users can listen to MP3 music, have an Internet chat, make a telephone call over the Internet, and etc. all at the same time.

#### A. Configuring Speakers:

(The following instructions use Windows XP as the example operating system.)

Step 1:

After installing the audio driver, the **Audio Manager** icon  will appear in your system tray. Double-click the icon to access the Audio Control Panel.

Before installing the audio driver, make sure the "Microsoft UAA Bus driver for High Definition Audio" has been installed from the motherboard driver disk and your operating system has been updated with the latest Service Pack for Windows.

(Note) 2/4/5.1/7.1-Channel Audio Configurations:

Refer to the following for multi-channel speaker configurations.

- 2-channel audio: Headphone or Line out.
- 4-channel audio: Front speaker out and Rear speaker out.
- 5.1-channel audio: Front speaker out, Rear speaker out, and Center/Subwoofer speaker out.
- 7.1-channel audio: Front speaker out, Rear speaker out, Center/Subwoofer speaker out, and Side speaker out.

## Step 2:

Click the **Audio I/O** tab. In the speaker list on the left, select **2CH Speaker**, **4CH Speaker**, **6CH Speaker**, or **8CH Speaker** according to the type of speaker configuration you wish to set up.

## Step 3:

Everytime you connect an audio device to an audio jack, the **Connected device** box appears. Select the device according to the type of device you connect. Then click **OK** to complete the configuration.

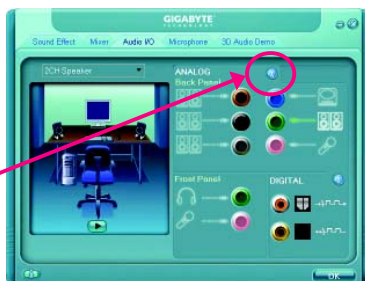

## B. Configuring Sound Effect:

You may configure an audio environment on the **Sound Effect** tab.

## C. Configuring AC'97 Audio:

If you want to connect an AC'97 front panel audio module, click the tool icon on the **Audio I/O** tab. On the **Global Connector Settings** box, select the **Disable front panel jack detection** check box. Click **OK** to activate the AC'97 functionality.

When using an AC'97 front panel audio module, you can only have audio signals present on either the front or the back panel audio connections, but not both at the same time.

## 5-2-2 Installing the S/PDIF In Cable (Optional)

The S/PDIF in cable provides S/PDIF in functionality.

### S/PDIF In:

The S/PDIF in jacks allow you to input digital audio signals to the computer for audio processing.

#### A. Installing the S/PDIF In Cable:

##### Step 1:

First, attach the connector at the end of the cable to the SPDIF\_IN header on your motherboard.

##### Step 2:

Secure the metal bracket to the chassis back panel with a screw.

## S/PDIF Out:

The S/PDIF out jacks can transmit audio signals to an external decoder for decoding to get the best audio quality.

### B. Connecting a S/PDIF out Cable

S/PDIF Coaxial Cable

S/PDIF Optical Cable

Connect a S/PDIF coaxial cable or a S/PDIF optical cable (either one) to an external decoder for transmitting the S/PDIF digital audio signals.

### C. Configuring S/PDIF out:

Click the tool icon in the **DIGITAL** section. In the **S/PDIF In/Out Settings** dialog box, select an output sampling rate and select (or disable) the output source. Click **OK** to complete the configuration.

### 5-2-3 Configuring Microphone Recording

Step 1:

After installing the audio driver, the **Audio Manager** icon  will appear in your system tray. Double-click the icon to access the Audio Control Panel.

Step 2:

Connect your microphone to the Mic in jack (pink) on the back panel or the Mic in jack (pink) on the front panel. Then configure the jack for microphone functionality.

Note: The microphone functions on the front panel and back panel cannot be used at the same time.

Step 3:

Locate the **Volume** icon  in your system tray and click it to open the volume control panel.

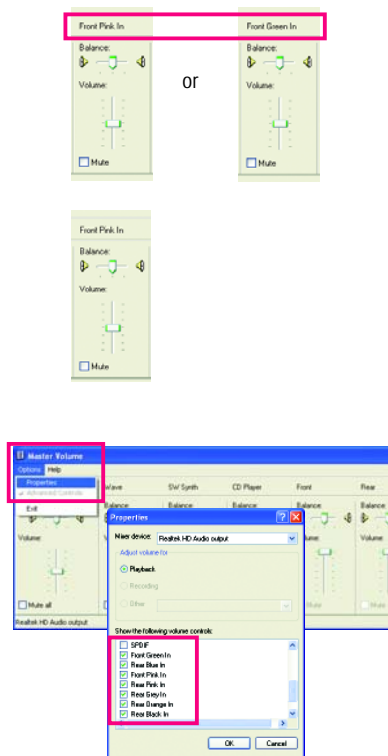

#### Step 4:

To hear the sound being recorded during the recording process when using the microphone function on the front panel, do not select the **Mute** check box under **Front Pink In** or **Front Green In** in **Master Volume**. It is recommended that you set the volume at a middle level.

To hear the sound being recorded during the recording process when using the microphone function on the back panel, do not select the **Mute** check box under **Rear Pink In** in **Master Volume**. It is recommended that you set the volume at its middle level.

#### (Note)

If you cannot find the volume control options you need in **Master Volume**, go to the **Options** menu and then choose **Properties**. Select the volume control options you wish to show and click **OK** to complete.

#### Step 5:

Next, while in **Master Volume**, go to **Options** and click **Properties**. In the **Mixer device** list, select **Realtek HD Audio Input**. Then set the recording sound level properly. Do NOT mute the recording sound, or you will not hear any sound when playing back the recording you just made.

Select **Realtek HD Audio Input** in the **Mixer device** list

#### (Note)

Based on the audio specifications, to adjust the recording sound, use the **Recording** option to set the recording sound for your recording device(s) altogether.

Recording Control

#### Step 6:

To raise the recording and playing sound for the microphone, go to **Options** in **Master Volume** and select **Advanced Controls**. Click the **Advanced** button under a volume control option (e.g. Front Green In, Front Pink In). In the **Other Controls** field, select the **1 Microphone Boost** check box.

#### Step 7:

After completion, click **Start**, point to **All Programs**, point to **Accessories**, point to **Entertainment**, and then click **Sound Recorder** to begin the sound recording.

## 5-2-4 Using the Sound Recorder

### Recording the Sound:

1. Make sure you have connected the audio input device (e.g. microphone) to the computer.
2. On the **File** menu, choose **New**.
3. To record a sound file, click the **Recording** button .
4. To stop the recording, click the **Stop** button . Be sure to save the recording upon completion.

### Playing the Sound:

1. On the **File** menu, choose **Open**.
2. In the **Open** dialog box, select the sound (.wav) file you wish to play.
3. To play a sound file, click the **Play** button .
4. To stop playing, click the **Stop** button .
5. You may use the **Fast Forward** button  to move to the beginning of a file or the **Fast Backward** button  to the end.

## 5-3 Troubleshooting

### 5-3-1 Frequently Asked Questions

To read more FAQs for your motherboard, please go to the Support\Motherboard\FAQ page on GIGABYTE's website.

Q: In the BIOS Setup program, why are some BIOS options missing?

A: Some advanced options are hidden in the BIOS Setup program. Press <Delete> to enter BIOS Setup during the POST. In the Main Menu, press <Ctrl>+<F1> to show the advanced options.

Q: Why is the light of my keyboard/optical mouse still on after the computer shuts down?

A: Some motherboard provides a small amount of standby power after the computer shuts down and that's why the light is still on.

Q: How do I clear the CMOS values?

A: If your motherboard has a clearing CMOS jumper, refer to the instructions on the CLR\_CMOS jumper in Chapter 1 to short the jumper to clear the CMOS values. If your board doesn't have this jumper, refer to the instructions on the motherboard battery in Chapter 1. You can temporarily remove the battery from the battery holder to stop supplying power to the CMOS, which will clear the CMOS values after about one minute. Refer to the steps below:

Steps:

1. Turn off your computer and unplug the power cord.
2. Gently remove the battery from the battery holder and wait for one minute.  
(Or use a metal object like a screwdriver to touch the positive and negative terminals of the battery holder, making them short for 5 seconds.)
3. Replace the battery.
4. Plug in the power cord and restart your computer.
5. Press <Delete> to enter BIOS Setup. Select "Load Fail-Safe Defaults" (or "Load Optimized Defaults") to load BIOS default settings.
6. Saves changes and exit BIOS Setup (select "Save & Exit Setup") to restart your computer.

Q: Why do I still get a weak sound even though I have turned my speaker to the maximum volume?

A: Make sure your speaker is equipped with an internal amplifier. If not, try a speaker with power/amplifier.

Q: What do the beeps emitted during the POST mean?

A: The following Award BIOS beep code descriptions may help you identify possible computer problems.  
(For reference only.)

1 short: System boots successfully

2 short: CMOS setting error

1 long, 1 short: Memory or motherboard error

1 long, 2 short: Monitor or graphics card error

1 long, 3 short: Keyboard error

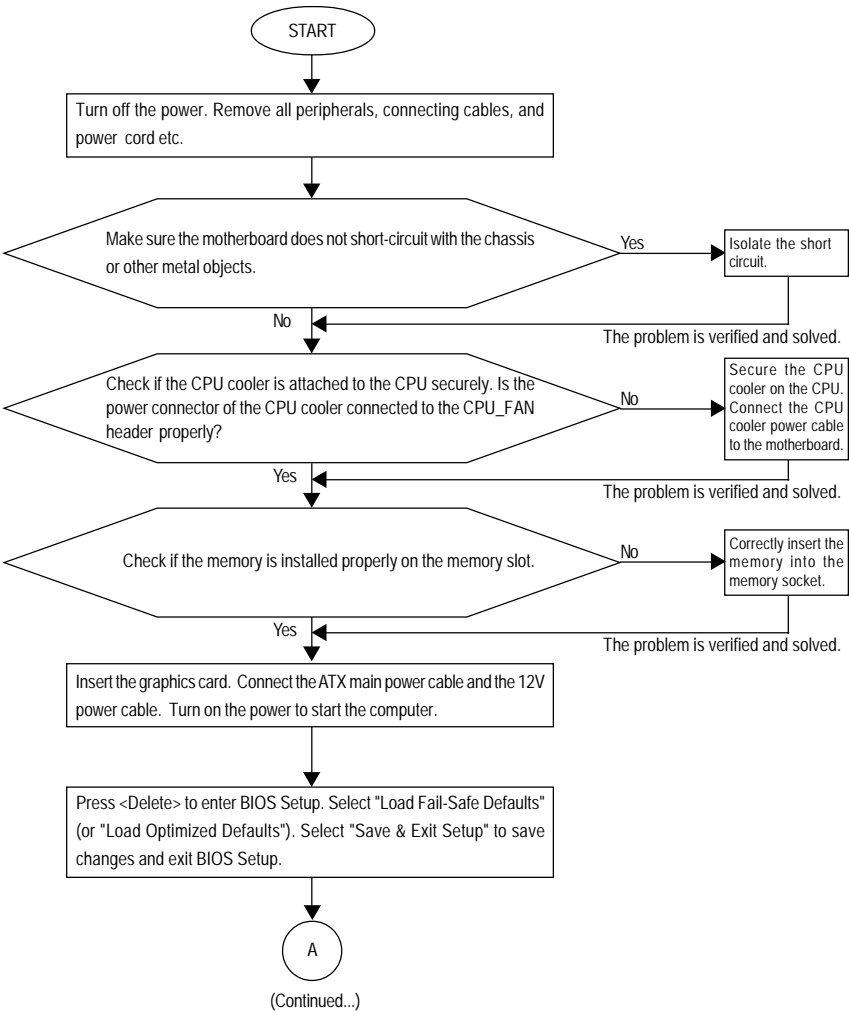

1 long, 9 short: BIOS ROM error

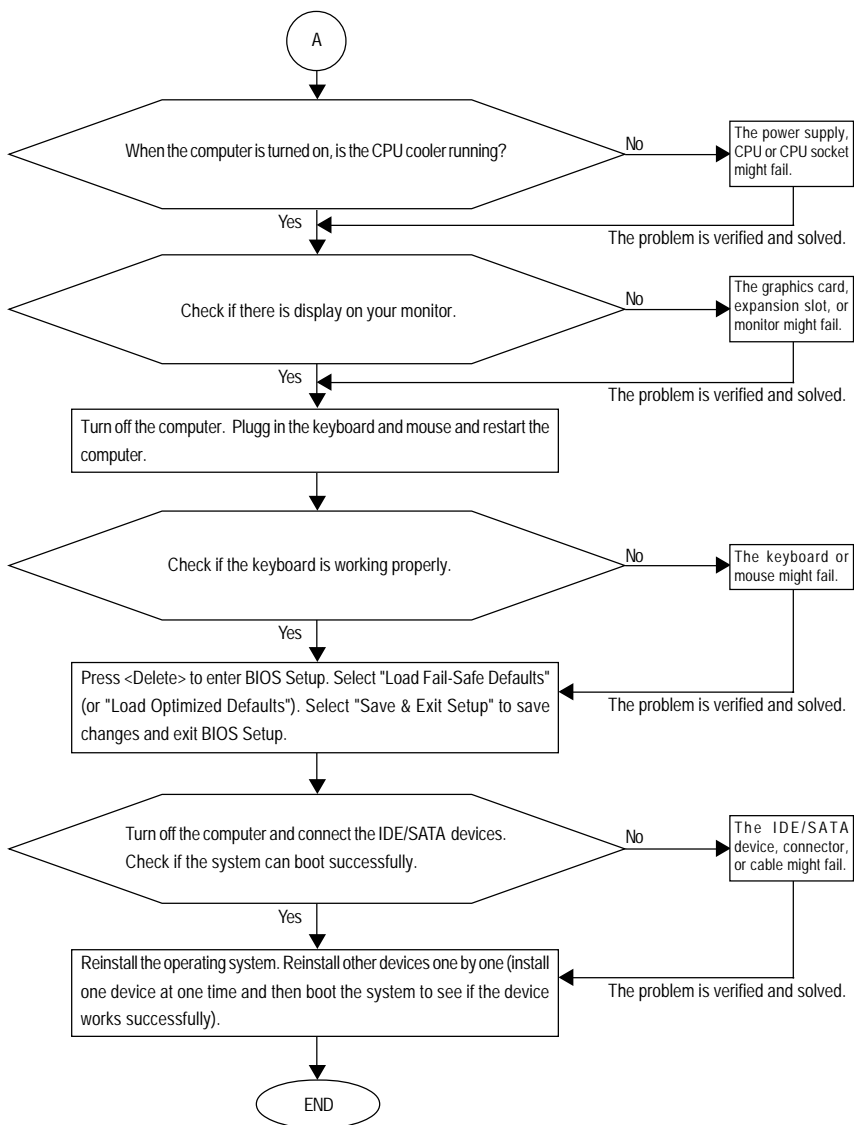

Continuous long beeps: Graphics card not inserted properly

Continuous short beeps: Power error

### 5-3-2 Troubleshooting Procedure

If you encounter any troubles during system startup, follow the troubleshooting procedure below to solve the problem.

NOTE

If the procedure above is unable to solve your problem, contact the place of purchase or local dealer for help. Or go to the Support\Technical Service Zone page to submit your question. Our customer service staff will reply you as soon as possible.

# Regulatory Statements

## Regulatory Notices

This document must not be copied without our written permission, and the contents there of must not be imparted to a third party nor be used for any unauthorized purpose. Contravention will be prosecuted. We believe that the information contained herein was accurate in all respects at the time of printing. GIGABYTE cannot, however, assume any responsibility for errors or omissions in this text. Also note that the information in this document is subject to change without notice and should not be construed as a commitment by GIGABYTE.

## Our Commitment to Preserving the Environment

In addition to high-efficiency performance, all GIGABYTE motherboards fulfill European Union regulations for RoHS (Restriction of Certain Hazardous Substances in Electrical and Electronic Equipment) and WEEE (Waste Electrical and Electronic Equipment) environmental directives, as well as most major worldwide safety requirements. To prevent releases of harmful substances into the environment and to maximize the use of our natural resources, GIGABYTE provides the following information on how you can responsibly recycle or reuse most of the materials in your "end of life" product.

## Restriction of Hazardous Substances (RoHS) Directive Statement

GIGABYTE products have not intended to add and safe from hazardous substances (Cd, Pb, Hg, Cr+6, PBDE and PBB). The parts and components have been carefully selected to meet RoHS requirement. Moreover, we at GIGABYTE are continuing our efforts to develop products that do not use internationally banned toxic chemicals.

## Waste Electrical & Electronic Equipment (WEEE) Directive Statement

GIGABYTE will fulfill the national laws as interpreted from the 2002/96/EC WEEE (Waste Electrical and Electronic Equipment) directive. The WEEE Directive specifies the treatment, collection, recycling and disposal of electric and electronic devices and their components. Under the Directive, used equipment must be marked, collected separately, and disposed of properly.

## WEEE Symbol Statement

The symbol shown below is on the product or on its packaging, which indicates that this product must not be disposed of with other waste. Instead, the device should be taken to the waste collection centers for activation of the treatment, collection, recycling and disposal procedure. The separate collection and recycling of your waste equipment at the

time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local government office, your household waste disposal service or where you purchased the product for details of environmentally safe recycling.

- When your electrical or electronic equipment is no longer useful to you, "take it back" to your local or regional waste collection administration for recycling.
- If you need further assistance in recycling, reusing in your "end of life" product, you may contact us at the Customer Care number listed in your product's user's manual and we will be glad to help you with your effort.

Finally, we suggest that you practice other environmentally friendly actions by understanding and using the energy-saving features of this product (where applicable), recycling the inner and outer packaging (including shipping containers) this product was delivered in, and by disposing of or recycling used batteries properly. With your help, we can reduce the amount of natural resources needed to produce electrical and electronic equipment, minimize the use of landfills for the disposal of "end of life" products, and generally improve our quality of life by ensuring that potentially hazardous substances are not released into the environment and are disposed of properly.

## China Restriction of Hazardous Substances Table

The following table is supplied in compliance with China's Restriction of Hazardous Substances (China RoHS) requirements:

关于符合中国《电子信息产品污染控制管理办法》的声明  
Management Methods on Control of Pollution from Electronic Information Products  
(China RoHS Declaration)

产品中有毒有害物质或元素的名称及含量  
Hazardous Substances Table

部件名称 (Parts)	有毒有害物质或元素 (Hazardous Substances)					
	铅 (Pb)	汞 (Hg)	镉 (Cd)	六价铬 (Cr (VI))	多溴联苯 (PBB)	多溴二苯醚 (PBDE)
PCB板 PCB	○	○	○	○	○	○
结构件及风扇 Mechanical parts and Fan	×	○	○	○	○	○
芯片及其他主动零件 Chip and other Active components	×	○	○	○	○	○
连接器 Connectors	×	○	○	○	○	○
被动电子元件 Passive Components	×	○	○	○	○	○
线材 Cables	○	○	○	○	○	○
焊接金属 Soldering metal	○	○	○	○	○	○
助焊剂、散热膏、标签及其他耗材 Flux, Solder Paste, Label and other Consumable Materials	○	○	○	○	○	○
○:表示该有毒有害物质在该部件所有均质材料中的含量均在SJ/T11363-2006标准规定的限量要求以下。 Indicates that this hazardous substance contained in all homogenous materials of this part is below the limit requirement SJ/T 11363-2006						
×:表示该有毒有害物质至少在该部件的某一均质材料中的含量超出SJ/T11363-2006标准规定的限量要求。 Indicates that this hazardous substance contained in at least one of the homogenous materials of this part is above the limit requirement in SJ/T 11363-2006						
对销售之日的所发售产品, 本表显示我公司供应链的电子信息产品可能包含这些物质。注意: 在所售产品中可能会也可能不会含有所有列出的部件。 This table shows where these substances may be found in the supply chain of our electronic information products, as of the date of the sale of the enclosed products. Note that some of the component types listed above may or may not be a part of the enclosed product.
